Catalogue 2022 – 2023

antal

What we are skilful in, is mechanic. What we are keen on, is the beauty of a silent sailing boat in the wind. That's why we make sailing equipment in the best possible way, so that you can find in our products the high level of our job.

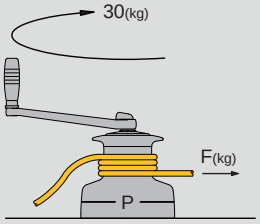
Index

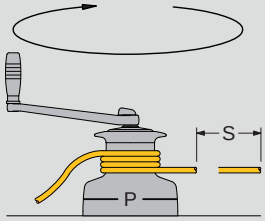
Winches

Technical infos



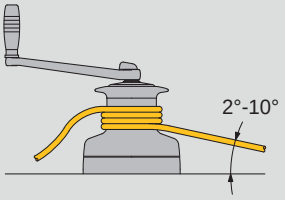
WINCH POWER AND MAXIMUM FORCE

To calculate the maximum force (F), first use the tables to find winch power (P). Assuming the efficiency is 70% and the maximum force exerted on the handle is 30 kg, the maximum force obtainable will be: F = 20×P (kg) i.e. twenty times the winch power. For example, for a model with a winch power 50, the maximum force would be F = 20×50 = 1000 Kg.



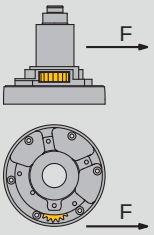
RECOVERY SPEED

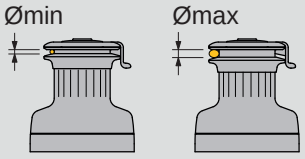
The recovery speed (S) is the length of line recovered with one turn of the handle. It is the converse of the winch power (P), and can be calculated using the formula: S = 1600/P (mm) For example, a model with winch power 50 would have a recovery speed of S = 1600/50 = 32 mm for each 360° turn of the handle.



WINCH MOUNTING

Line drum lead angle: it is correct to provide an angle of between 2 and 10 degrees. It is advisable for the output gear of 2 speed models to be positioned with respect to pull direction, as shown in the figure (90°).





SPRING-LOADED SELF-TAILING

The new Self-tailing winches with spring-loaded disks adapt automatically to even the thinnest lines. We recommend to put three or four wraps of line on the drum, otherwise excessive load on the Self-tailing disks could cause the line to slip.

MAINTENANCE

Clean the winch by removing any old grease with a solvent (e.g. using diesel fuel). Spread a thin layer of marine grease on all moving parts. Grease will protect aluminium from corrosion (where contact with dissimilar metal occurs). It is useful to use some grease especially on stainless steel screws, threads and stainless washers. For a complete documentation ask for the “Winch User’s Guide”.

LUBRICATION

Antal uses HYDROLUB (MOD. **HDR**) for winch and gear lubrication.
This grease can be supplied (in 150 gr tubes) on request.

SPARE PARTS

Antal can supply you with a universal repair kit (MOD. **XTKIT**) suitable for all winch types, including 4 pawls and 4 pawl springs.

Standard winches

STANDARD WINCHES

There are three series of standard winches: one direct speed winches, small and fast models for boats up to 6-7m. Two speed winches, direct and reduced: medium size models for boats up to 9-10m. Two reduced speed winches, medium-large size models for boats up to 12-13m.

CNSM, LaCinquanta 2020 – Ph. G. Marcorin

SNUBBING WINCH → W5

Basic model, snubbing winch without handle, completely glass-fiber resin made.

MOD. **W5**

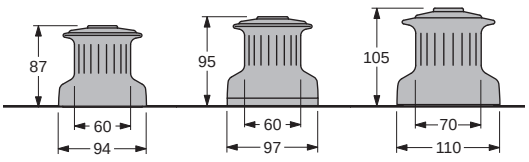
MODEL	W5
BASE mm	80
HEIGHT mm	66
WEIGHT g	193
SCREWS N x **Ø** mm	4 × Ø 6

ONE DIRECT SPEED WINCHES → W6, W7, W8

Turn the handle clockwise to engage the single direct gear; the handle turns freely counter-clockwise.

- MOD. **W6** is the smallest and lightest in the range, with a glass-fibre resin base and drum and an aluminium central rod.
- MOD. **W7** is similar but with a hard black anodized aluminium drum.
- MOD. **W8** has an AISI 316 stainless steel central rod, an aluminium base and a black anodized aluminium (**AL**) or chrome-plated (**CH**) drum mounted on roller bearings.

MOD. **W8AL** + MOD. **W8CH**



ONE SPEED WINCHES ↓

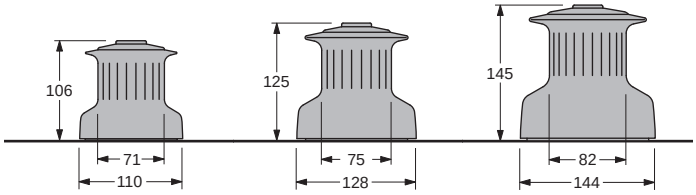
MODEL	W6	W7	W8
POWER P1	6.7	6.7	7.3
RECOVERY S1 mm	188	188	220
WEIGHT AL kg	0.43*	0.70	1.60
WEIGHT CH kg	-	-	2.10
SCREWS N x Ø mm	5 × Ø6	5 × Ø6	5 × Ø6

* Glass fibre resin drum.
For mod. W6 and W7 winch power is calculated with short handle (L – 200 mm).

TWO SPEED WINCHES: DIRECT, REDUCED → W16, W30, W42

The first speed is direct (one turn of the drum for each turn of the handle); the second speed is reduced: slower but more powerful.
Bronze base and gears, AISI 316 stainless steel central rod and roller bearings, and black anodized aluminium (**AL**) or chrome-plated (**CH**) drums.

MOD. **W42AL** + MOD. **W42CH**



Yak2, M. Gallo
LaCinquanta 2020

TWO SPEED WINCHES ↓

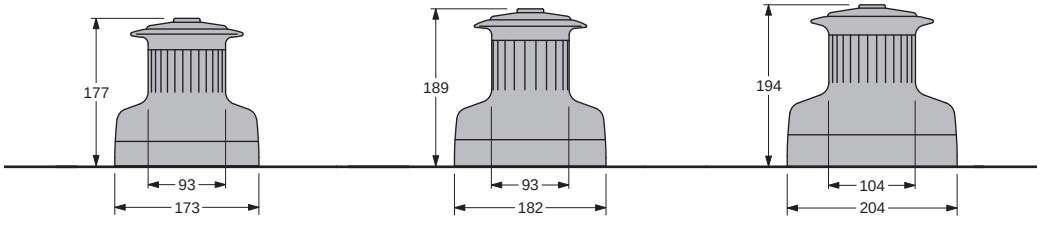
MODEL	W16	W30	W42
POWER P1-P2	7.3 / **14.5**	7.0 / **28.0**	6.4 / **42.5**
RECOVERY S1-S2 mm	220 / 110	235 / 60	250 / 37
WEIGHT AL kg	2.00	2.80	4.10
WEIGHT CH kg	2.90	3.80	6.00
SCREWS N x Ø mm	5 × Ø6	5 × Ø6	5 × Ø8

P1, P2: power with the first (fast) and second (slow) gear.
S1, S2: recovery speed, the length of line recovered with one turn of the handle in first gear and in second gear.

TWO REDUCED SPEED WINCH → W44, W48, W52

Quick and powerful operation is obtainable with the first reduced speed, then with increasing load, simply wind in the opposite direction the second gear and maximum power is automatically selected. Marine bronze is used for gears, AISI 316 stainless steel for central rod and roller bearings, CNC aluminium base, hard black anodized aluminium (**AL**) or chrome-plated (**CH**) drum.

MOD. **W52AL** + MOD. **W52CH**



TWO SPEED WINCHES ↓

MODEL	W44	W48	W52
POWER P1-P2	20.0 / **43.0**	19.0 / **47.4**	14.9 / **51.1**

WEIGHT AL kg	5.50	6.30	7.80
WEIGHT CH kg	8.50	9.50	11.50
SCREWS N x Ø mm	6 × Ø8	6 × Ø8	6 × Ø8

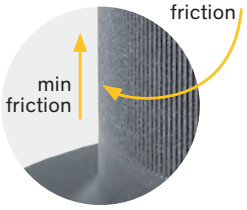
XT winches

Chrome plated **CH**

Hard black anodized aluminium **AL**

Simple opening

New XT system

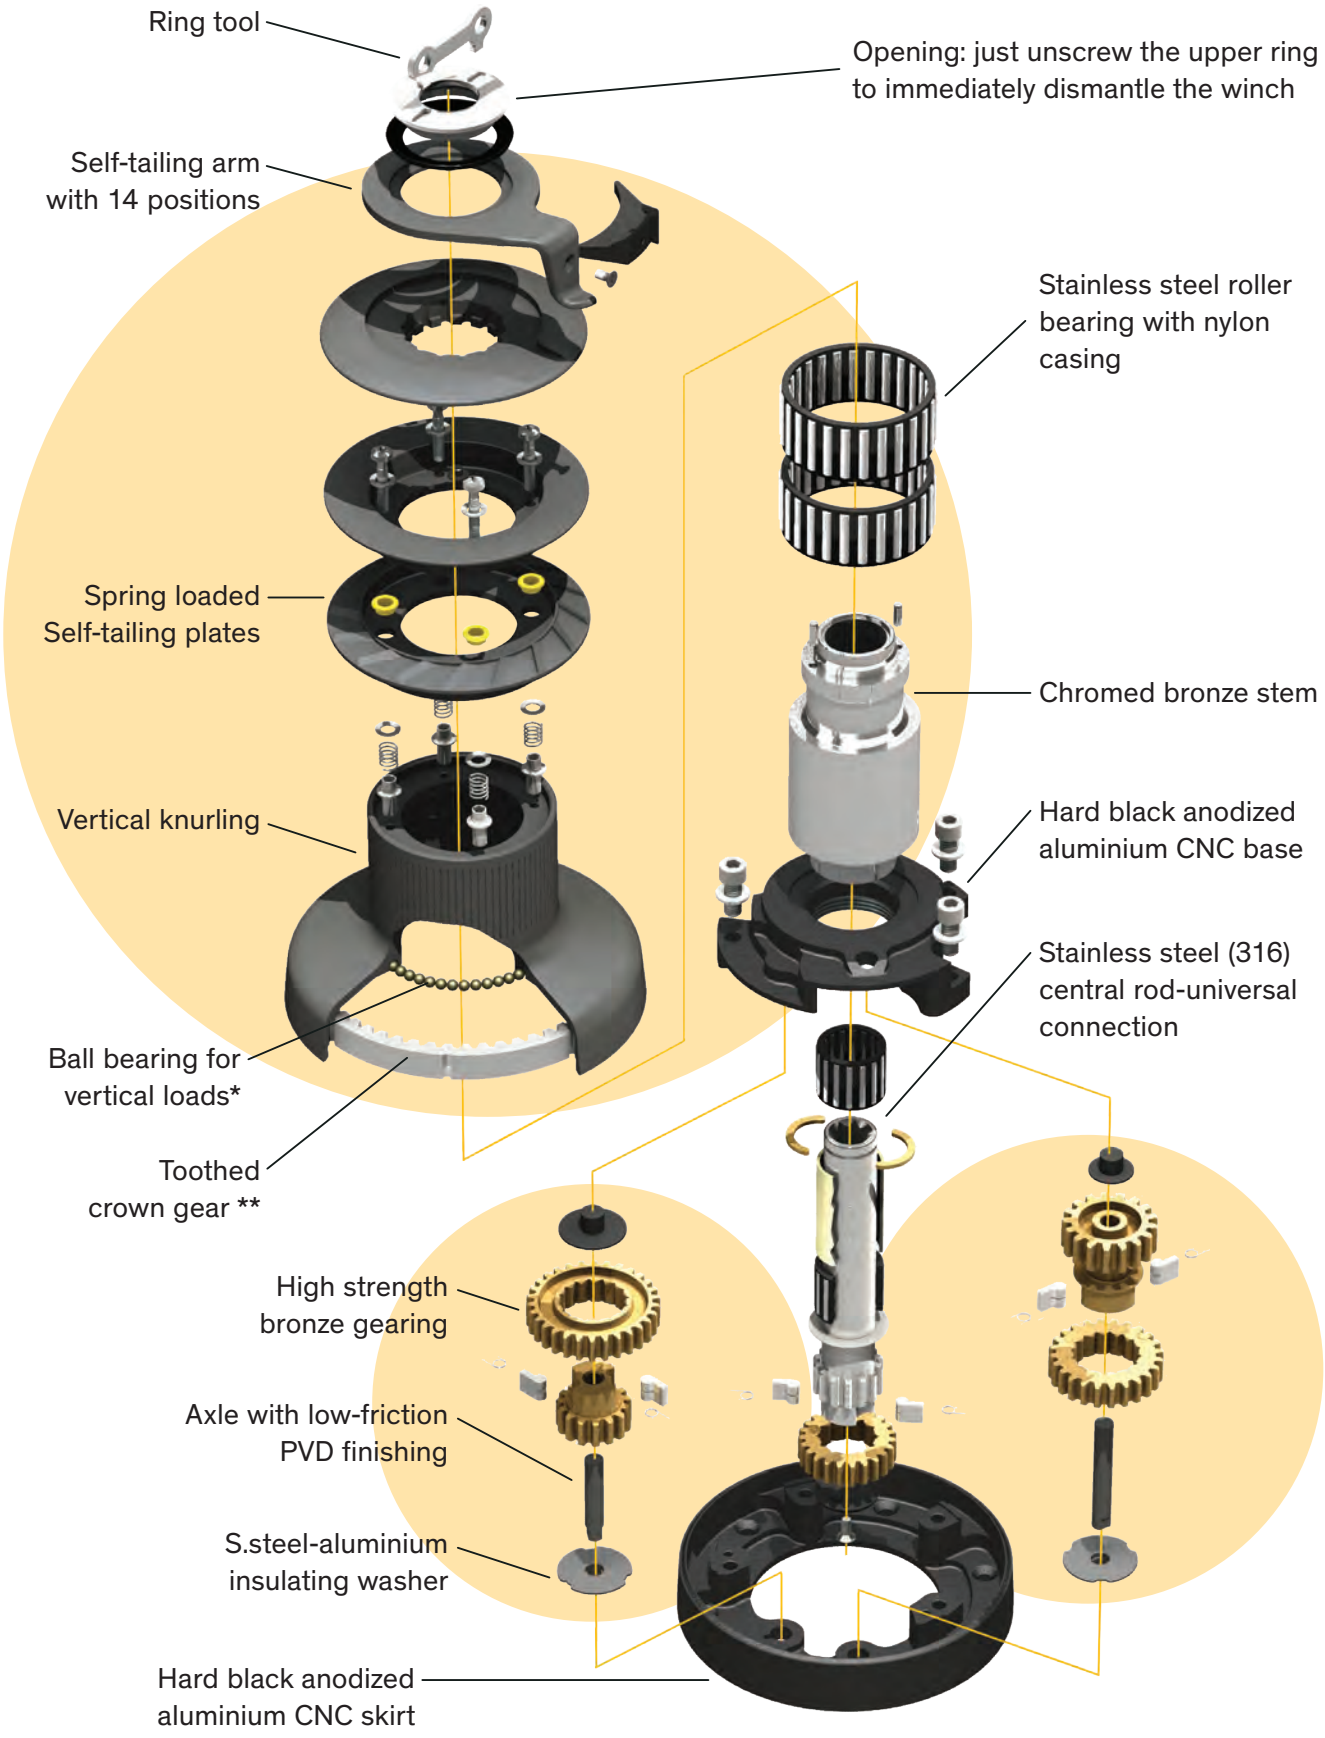


Vertical knurling

CNC base

15 new Self-tailing winches available in the following versions:
HARD BLACK ALUMINIUM (AL): the aluminium drum is hard black anodized and teflon coated, scratch-proof and very hard-wearing (page 12-13).
CHROME (CH): the drum, ST disks and ST arm are entirely chrome-plated. All chromed parts are highly polished, thickly nickel-plated and finally finished in chrome (pages 12-13).
RACE (R): racing series obtained by lightening the previous series AL (page 26).
CLASSIC (CHC and **BNC)**: fully chromed or with natural bronze finish (page 30).
Moreover an electric and hydraulic powered series are also available. (page 16-23)
Antal winches have a three-year warranty.
SIMPLE OPENING: just unscrew the upper ring to immediately dismantle the winch for an easy of cleaning and maintenance.

NEW SELF-TAILING XT SYSTEM: fixed upper disk with built in ST arm and self-regulating lower disk on springs. The new Self-tailing adapts automatically to a wide range of rope diameters and, if overloading occurs, releases the line to avoid excess force on the ST arm.
KNURLING: the drum vertical knurling offers maximum horizontal friction allowing the rope “slide” upwards. Differentiated grip (aluminium drums only): minimum friction on the lower part where loads are higher and maximum at the top where loads are minimal: the result is an even grip along the entire drum.
CNC BASE: machined by CNC (computer numeric control machines) is lighter and stronger than normal castings; aluminium made, hard black anodized and teflon coated. Easy removal from the winch makes maintenance a simple affair.



DRAWING REFERS TO WINCH MODELS FROM XT44 to XT62

* Ball bearing for vertical load: from model XT48, on smaller models it is replaced by a plastic washer.

** The aluminium drum fitted with a high strength alloy crown gear is provided on the following XT models: sizes 62, 66, 70 and 76, all racing winches from size 40 to size 76, all electrical and hydraulic versions up to size 62. The electric and hydraulic versions of models XT66, XT70, XT76 and XT80 are fitted with AISI 316 s.steel crown gear.

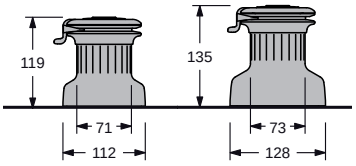
Self-tailing XT winches

ONE REDUCED SPEED WINCH → XT16, XT30

The two smallest models (**XT16** and **XT30**) have a single reduced speed, giving a slow but powerful gear. The handle turns freely the other way. Both available in chrome (**CH**) or hard black alloy (**AL**).

MOD. **XT30AL**

MOD. **XT30CH**



ONE SPEED WINCHES ↓

MODEL	XT16	XT30
POWER P1	14	28
RECOVERY S1 mm	115	58
Ø LINE mm	6 / 10	6 / 10
WEIGHT AL kg	2.4	2.7
WEIGHT CH kg	3.1	3.8
SCREWS N x Ø mm	5 × Ø6	5 × Ø6

TWO SPEED WINCHES: DIRECT, REDUCED → XT16.2, XT30.2

The addition of a direct speed to the above described models gives a faster recovery gear, which, combined with reduced weight and an automatic Self-tailing for very thin lines, makes these models the best choice for racing.

TWO SPEED WINCHES ↓

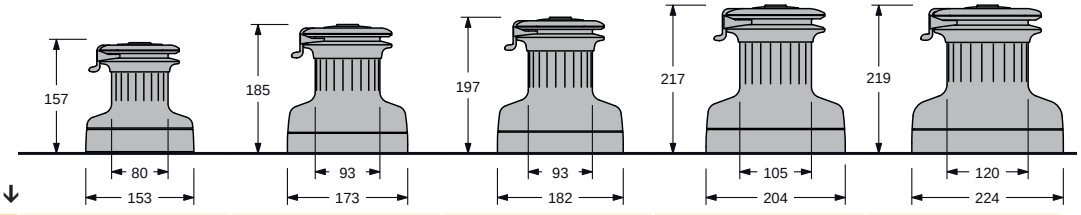
MODEL	XT16.2	XT30.2
POWER P1-P2	7.0 / **14**	7.0 / **28**
RECOVERY S1-S2 mm	229 / 115	229 / 58
Ø LINE mm	6 / 10	6 / 10
WEIGHT AL kg	2.6	2.9
WEIGHT CH kg	3.0	3.7
SCREWS N x Ø mm	5 × Ø6	5 × Ø6

TWO REDUCED SPEED WINCHES → XT40, XT44, XT48, XT52, XT62

Quick and powerful operation is obtainable with the first reduced speed, then with increasing load, simply wind in the opposite direction the second gear and maximum power is automatically selected.

MOD. **XT52AL**

MOD. **XT52CH**



TWO SPEED WINCHES ↓

MODEL	XT40	XT44	XT48	XT52	XT62
POWER P1-P2	12.8 / **40.0**	20.0 / **43.0**	19.0 / **47.4**	15.9 / **52.8**	17.8 / **62.1**
RECOVERY S1-S2 mm	125 / 40	80 / 38	84 / 34	100 / 30	89 / 26

WEIGHT CH kg	5.9	8.7	9.9	13.0	15.7
SCREWS N x Ø mm	5 × Ø8	6 × Ø8	6 × Ø8	6 × Ø8	6 × Ø8

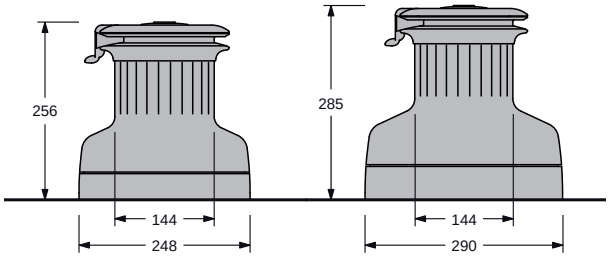
All these models (from size 40) can be powered with electric or hydraulic motors (page 16-23).

TWO REDUCED SPEED WINCHES → XT66, XT70

Large drum winches for 15-18m boats.
All the gears are fitted with roller bearings and the drum works on a very wide diameter roller-ball bearings.

MOD. **XT70CH**

MOD. **XT70AL**



TWO SPEED WINCHES ↓

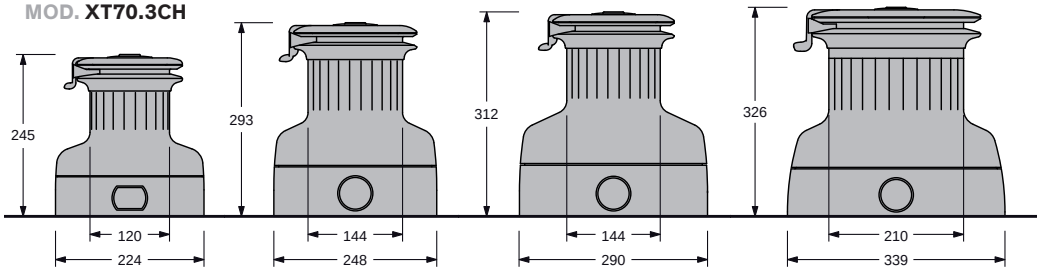
MODEL	XT66	XT70
POWER P1-P2	18.0 / **65.6**	27.1 / **69.8**
RECOVERY S1-S2 mm	89 / 24	59 / 23
Ø LINE mm	10 / 18	10 / 18
WEIGHT AL kg	12.8	18.5
WEIGHT CH kg	24.6	30.0
SCREWS N x Ø mm	6 × Ø10	6 × Ø10

THREE REDUCED SPEED WINCHES → XT62.3, XT66.3, XT70.3, XT80.3

The push-button on the base starts the first gear (the fastest); second and third gear are automatically selected simply by reversing the rotation of the handle.

MOD. **XT70.3AL**

MOD. **XT70.3CH**



THREE SPEED WINCHES ↓

MODEL	XT62.3	XT66.3	XT70.3	XT80.3
POWER P1-P2-P3	6.7 / 17.6 / **61.1**	10.7 / 20.8 / **65.3**	10.7 / 27.1 / **69.8**	11.0 / 30.0 / **81.4**
RECOVERY S1-S2-S3 mm	239 / 91 / 26	151 / 77 / 24	151 / 59 / 23	147 / 53 / 20
Ø LINE mm	8 / 16	10 / 18	10 / 18	12 / 20

WEIGHT CH kg	17.6	28.4	34.4	56.3
SCREWS N x Ø mm	6 × Ø8	6 × Ø10	6 × Ø10	8 × Ø10

P1-P2-P3: power with the first (fast), second (medium) and third (slow) gear.
S1-S2-S3: recovery speed, the length of line recovered with one turn of the handle in first, second and third gear.

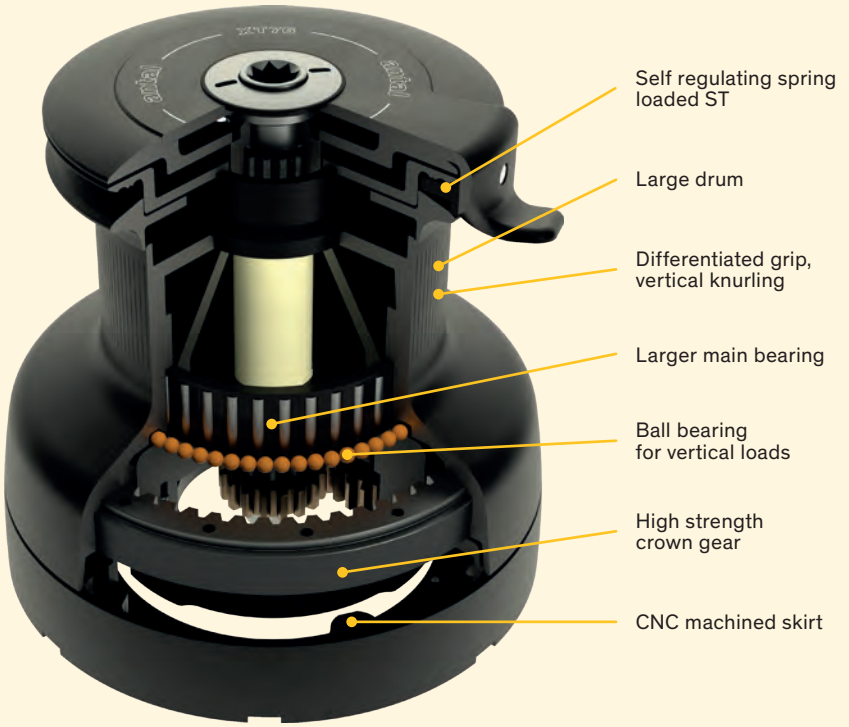
XT76

NEW

XT76 LARGE DRUM

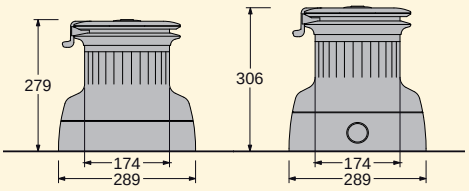
The new XT76 large drum winch fits perfectly between the XT66 and XT80 models. The large drum on larger bearings means power and efficiency with extremely high loads.

Antal offers a manual, vertical or horizontal drive electric version and an hydraulic version. A particularly light race model is also available, all these models can be supplied with 2 and even 3 speeds.



Manual

The values of weights and speeds are provisionals and will be confirmed in the technical data sheets of each model.



MODEL	XT76 TWO SPEED ↓	XT76.3 THREE SPEED ↓

HYDRAULIC WINCH
→ **SIZE** – 100 cc
PRESSURE – 120 bar
FLOW – 20 L/min

For line speeds consider the same values of above table ↑

	TWO SPEED ↓	THREE SPEED ↓
MODEL	**XT76HD**	**XT76.3HD**
GLOBAL WEIGHT AL kg	29.5	34
GLOBAL WEIGHT CH kg	41.5	46
WORKING LOAD kg	3400	3400
HYDRAULIC MOTOR ↓		
SIZE cc	125	125
PRESSURE bar	120	120
FLOW l/min	20	20

Note: for recovery speeds consider values of the electric version as an indication. The real values will depend on the sizing of the hydraulic unit.

LINE SPEED – the recovery speed is calculated with the winch not under load; at maximum load the figure should be reduced by 30%. For real values require Antal force-speed-absorption diagrams.

MANUAL USE – the gearbox-motor unit is disengaged simply by inserting the handle.

CIRCUIT DIAGRAM – for the circuit diagram and accessories, such as switches, control boxes and breakers, see page 21.

All our electric winches are Self-tailing and are available in both versions: with chrome-plated drum or with a reinforced black aluminium drum.

For more information on these winches see pages 12-13.

Fountaine Pajot, Samana 59 – Ph. G. Martin-Raget

Electric winches

ELECTRIC WINCHES
All Antal winch models, from **XT40** to **XT80.3**, maxi **W80.3ST** and **W90.3ST** can be fitted with an electric motor.
All electric winches are available with a chromed drum, now also black aluminium drums with a reinforced crown gear (high resistance alloy or A316 s.steel) are available.

HORIZONTAL AND VERTICAL MOTORS: all the winches may be equipped with a horizontal motor and gearbox with a worm screw. The largest models may be supplied with a vertical motor which uses a high-efficiency hypocycloid speed reducer. Both solutions have been studied to ensure particularly compact dimensions and maximum silent operation.

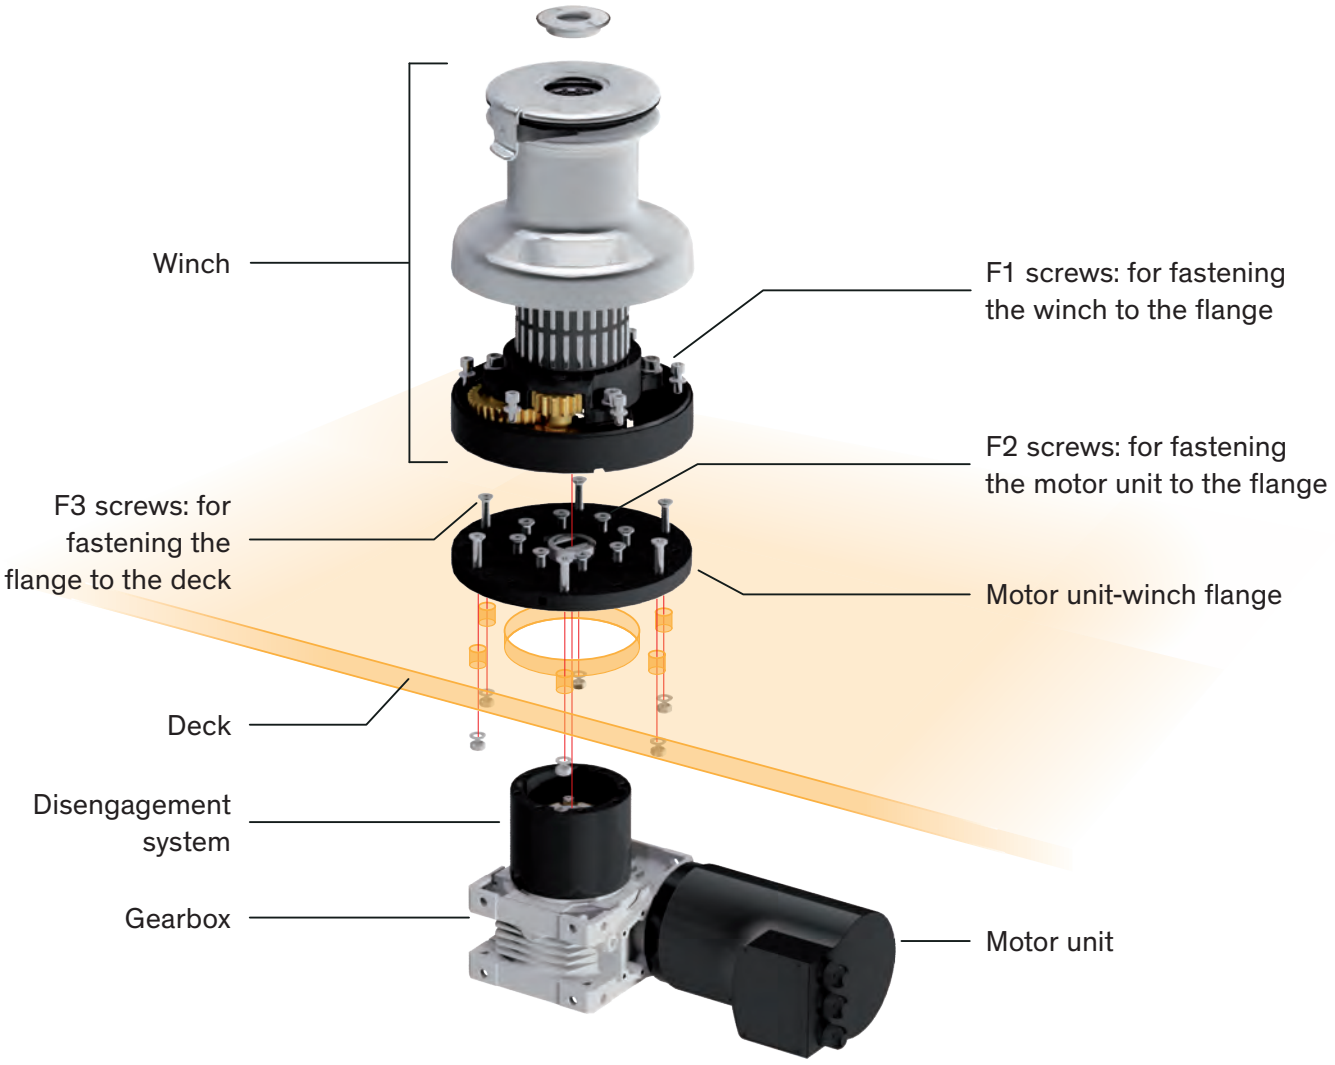
MANUAL USE: simply insert the handle to disconnect the gearbox-motor unit.

GREATER SAFETY: accidental starting of the motor does not affect the winch, avoiding dangerous turning of the handle.

GREATER EFFICIENCY: the gearbox-motor unit does not turn in manual use, avoiding needless friction.

SPEED
Electric winches maintain two speeds both in manual use (inverting the direction of rotation of the handle) and in electric use (pressing one of the two control buttons). It is of fundamental importance to be able to choose the most suitable speed for the manoeuvre that you want to perform; this allows fast recovery of the first part of the manoeuvre and more careful regulation in the final stage. In electric winches the speeds are higher than in manual use. The recovery speed, indicated in the tables, is measured without a load; in the presence of the maximum load, a speed reduction of up to 30% must be considered.

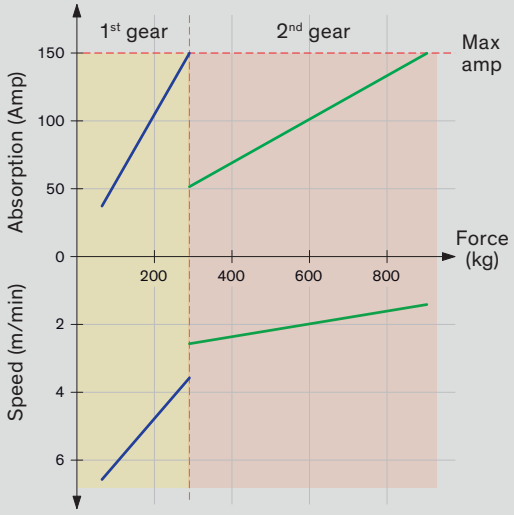
All our electric winches are self tailing. For more information on these winches see pages 12-13.



ELECTRIC WINCHES:
FORCE, ABSORPTION and SPEED

The force of the winch (pulling load), the current absorption (Amp) of the motor and the line recovery speed are related as shown in the diagrams obtained experimentally with load and recovery tests.
These diagrams are available for each model and clearly show the values of the maximum force with the fast and slow gears, the corresponding speed, and maximum electric absorption.

The documentation, including the force-absorption-speed diagrams, is available on request.

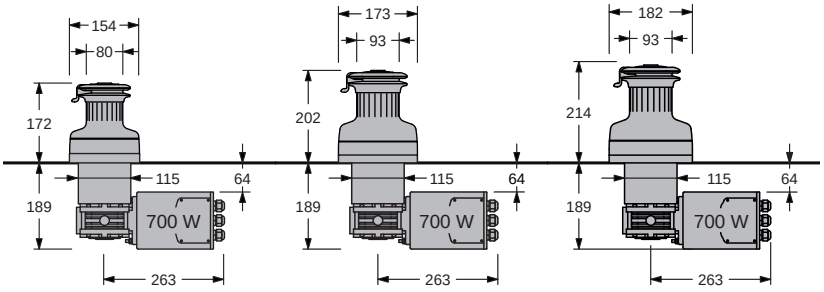


MOD. **XT40EH12AL**

MOD. **XT40EH12CH**

HORIZONTAL DRIVE - MOTOR 700W, 12/24V → XT40EH, XT44EH, XT48EH

The three MOD. **XT40**, **XT44** and **XT48** are powered with a 700 Watt motor, available in 12 and 24 Volt versions. Two switches, one control box and one breaker complete the system.



TWO SPEED WINCHES ↓

MODEL	XT40EH	XT44EH	XT48EH
LINE SPEED 1 m/min	12.0	11.0	11.0
LINE SPEED 2 m/min	4.5	4.0	4.0
WORKING LOAD kg	800	900	1000

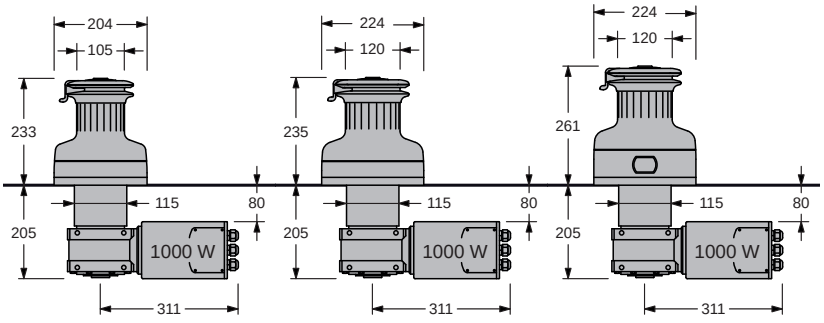
GLOBAL WEIGHT CH kg	17.7	20.7	22.1

MOD. **XT52EH12AL**

MOD. **XT52EH12CH**

HORIZONTAL DRIVE - MOTOR 1000W, 12/24V → XT40EH, XT44EH, XT48EH

MOD. **XT52**, **XT62** and **XT62.3** are powered with a 1000 Watt, 12 or 24 Volt motor.
Two switches, one control box and one breaker complete the system.



TWO OR THREE SPEED WINCHES ↓

MODEL	XT52EH	XT62EH	XT62.3EH
LINE SPEED 1 m/min	15.0	14.0	36.0
LINE SPEED 2 m/min	4.0	4.0	14.0
LINE SPEED 3 m/min	-	-	4.0
WORKING LOAD kg	1200	1500	1500
GLOBAL WEIGHT AL kg	26.3	28.3	30.2
GLOBAL WEIGHT CH kg	30.1	33.1	35.0

LINE SPEED – the recovery speed is calculated with the winch not under load; at maximum load the figure should be reduced by 30%.
MANUAL USE – the gearbox-motor unit is disengaged simply by inserting the handle.
CIRCUIT DIAGRAM – for the circuit diagram and accessories, such as switches, control boxes and breakers, see page 21.

All our electric winches are Self-tailing and are available in both versions: with chromed drum or with a reinforced black aluminium drum.

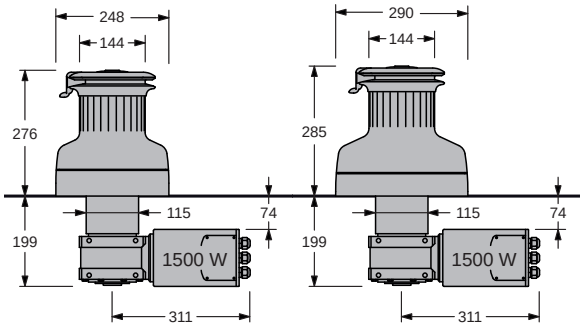
For more information on these winches see pages 12-13.

MOD. **XT70EH12AL**

MOD. **XT70EH12CH**

HORIZONTAL DRIVE - MOTOR 1500W, 12/24V → XT66EH, XT70EH

MOD. **XT66** and **XT70** are powered with a 1500 Watt, 12 or 24 Volt motor. Two switches, one control box and one breaker complete the system.



For the correct identification of the winch, add after the winch model in the tables the following:
- **12** or **24** for 12 or 24 Volt versions;
- **AL** for black aluminium drum or **CH** for chromed drum.

E.g.: XT66EH12AL is an electric winch size 66 with horizontal drive 12V motor and with black aluminium drum.

TWO SPEED WINCHES ↓

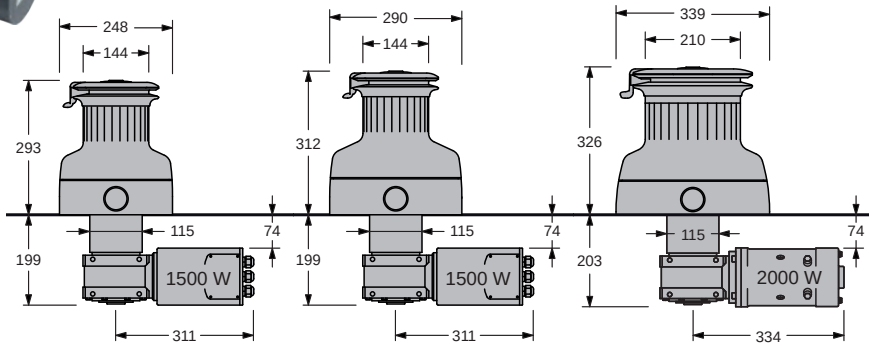
MODEL	XT66EH	XT70EH
LINE SPEED 1 m/min	12.0	9.0
LINE SPEED 2 m/min	3.5	3.0
WORKING LOAD kg	2500	3000
GLOBAL WEIGHT AL kg	31.9	35.9
GLOBAL WEIGHT CH kg	41.7	47.4

MOD. **XT70.3EH12AL**

MOD. **XT70.3EH12CH**

HORIZONTAL DRIVE - MOTOR 1500/2000 W, 12/24 V → XT66.3EH, XT70.3EH, XT80.3EH

These models maintain three speeds both in manual and in electric use; the push-button on the base starts the first gear (the fastest), second and third gear are automatically selected simply by reversing the rotation of the handle or pressing one of the two switches, one for the first and the third speed and one for the second.



THREE SPEED WINCHES ↓

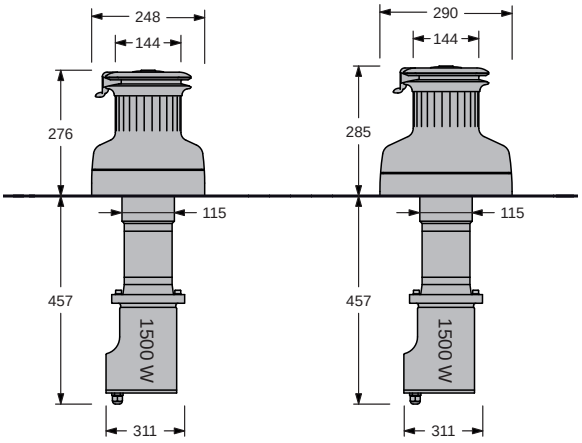
MODEL	XT66.3EH	XT70.3EH	XT80.3EH
LINE SPEED 1 m/min	22.0	21.0	24.0
LINE SPEED 2 m/min	12.0	9.0	9.0
LINE SPEED 3 m/min	3.5	3.0	3.0
WORKING LOAD kg	2500	3000	4000
GLOBAL WEIGHT AL kg	35.7	40.3	62.8
GLOBAL WEIGHT CH kg	45.5	51.8	77.5

MOD. **XT70EV12CH**

MOD. **XT70EV12AL**

VERTICAL DRIVE - MOTOR 1500W, 12/24V → XT66EV, XT70EV

This motor-gearbox system is suitable for the largest Antal winches: MOD. **XT66** and **XT70**. A special hypocycloidal gearbox gives max efficiency.



For the correct identification of the winch, add after the winch model in the tables the following:
- **12** or **24** for 12 or 24 Volt versions;
- **AL** for black aluminium drum or **CH** for chromed drum.

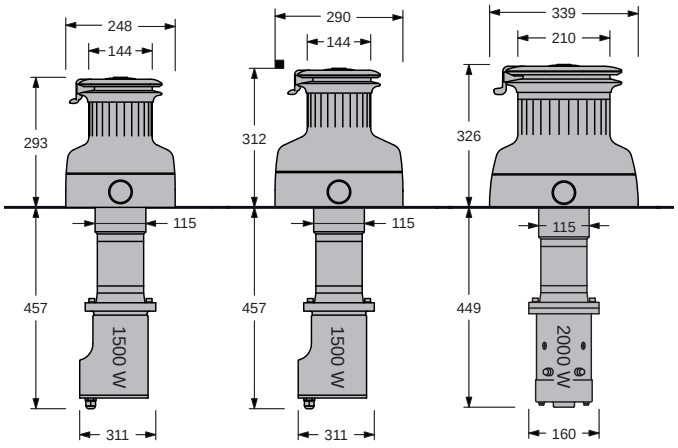
E.g.: XT66EV12AL is an electric winch size 66 with vertical drive 12V motor and with black aluminium drum.

TWO SPEED WINCHES ↓

MODEL	XT66EV	XT70EV
LINE SPEED 1 m/min	12.0	9.0
LINE SPEED 2 m/min	3.5	3.0
WORKING LOAD kg	2500	3000
GLOBAL WEIGHT AL kg	35.6	39.1
GLOBAL WEIGHT CH kg	45.4	50.6

VERTICAL DRIVE - MOTOR 1500/2000W 12/24V → XT66.3EV, XT70.3EV, XT80.3EV

The MOD. **XT66.3**, **XT70.3** and **XT80.3** maintain three speeds both in manual and in electric use; the push-button on the base starts the first gear (the fastest), second and third gear are automatically selected simply by reversing the rotation of the handle or pressing one of the two switches, one for the first and the third speed and one for the second.



THREE SPEED WINCHES ↓

MODEL	XT66.3EV	XT70.3EV	XT80.3EV
LINE SPEED 1 m/min	22.0	21.0	24.0
LINE SPEED 2 m/min	12.0	9.0	9.0
LINE SPEED 3 m/min	3.5	3.0	3.0
WORKING LOAD kg	2500	3000	4000
GLOBAL WEIGHT AL kg	38.6	42.1	64
GLOBAL WEIGHT CH kg	48.4	53.6	78.6

LINE SPEED – the recovery speed is calculated with the winch not under load; at maximum load the figure should be reduced by 30%.
MANUAL USE – the gearbox-motor unit is disengaged simply by inserting the handle.
CIRCUIT DIAGRAM – for the circuit diagram and accessories, such as switches, control boxes and breakers, see page 21.

All our electric winches are Self-tailing and are available in both versions: with chrome-plated drum or with a reinforced black aluminium drum.

For more information on these winches see pages 12-13.

MOD. WBC

POWERED WINCHES LOAD CONTROL

To guarantee complete protection for powered winches, Antal offers the **WBC**, which keeps the winch from reaching its maximum working load. The winch is generally activated in the fastest gear. When maximum absorption is reached, this gear is deactivated by the WBC and the slow gear must be used. This reduces the winch stress until maximum absorption (max load) is reached and the WBC also deactivates this slow gear. Another safety device is the breaker that protects the motor from overheating due to too intensive use. However, it does not protect the winch from sudden excessive loads. Therefore, both are necessary for complete protection. The WBC is suitable for two-speed Antal winches, with motors up to 2000W and maximum absorption of 250 amps.

Hydraulic winches

MOD. **XT62HDCH**

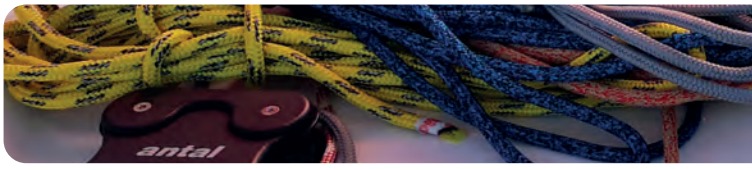
MOD. **XT62HDAL**

HYDRAULIC SYSTEM

Hydraulic motors are available for Antal winches from MOD. **XT44** to **XT80.3**, as well as to maxi **W80.3** and **W90.3**. The pressure of the system varies from 100 to 120 bars for the larger winches. Connections are to be carried out with 3/8" pipes. All hydraulic winches are available with a chromed drum, now also black aluminum drum with a reinforced crown gear (high resistance alloy or A316 s.steel) is available. For more information, see pages 12-13. For manual use, the motor unit is released simply by inserting the handle.

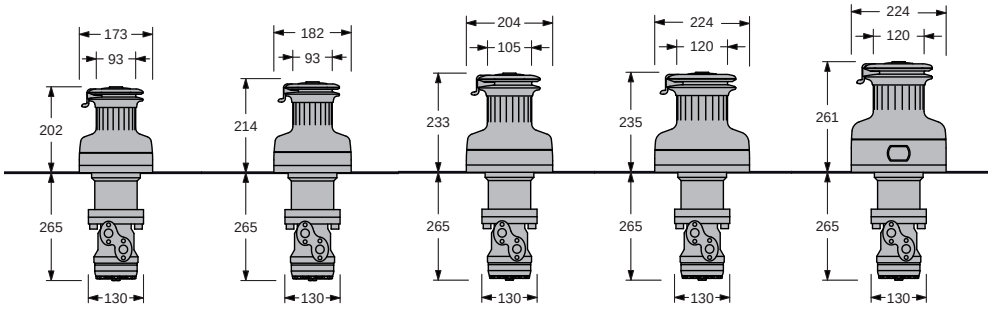
LINE SPEED

Line speeds are calculated in absence of load conditions and considering the flow of the lower table. The effective speed will be evaluated according to the actual size of the hydraulic unit.



For the correct identification of the winch, add after the winch model in the tables **AL** for black aluminium drum or **CH** for chromed drum.

E.g.: XT66HDAL is a hydraulic winch size 66 with black aluminium drum.



MODEL	XT44HD	XT48HD	XT52HD	XT62HD	XT62.3HD
LINE SPEED 1 m/min	12.0	12.5	16.0	13.0	36.9

GLOBAL WEIGHT AL kg	17.2	18.2	20.4	22.2	24.1
GLOBAL WEIGHT CH kg	19.7	21.2	24.2	27.0	28.9
HYDRAULIC MOTOR ↓					
SIZE cc	50	50	50	50	50
PRESSURE bar	100	100	120	120	120
FLOW l/min	7.5	7.5	7.5	7.5	7.5

HYDRAULIC UNIT

These units are designed for the different requirements of each boat. The winch speed is proportional to the flow from the hydraulic unit, the load of the winch is proportional to the pressure. The hydraulic unit that must work a number of winches at the same time, must guarantee a flow equal to the sum of the flows required from each one.
The flow and pressure levels given in the table for each winch must not be exceeded.

All these models are fitted with **Danfoss hydraulic motors series OMR** or equivalent.

SWITCHES

Two switches with watertight protection must be installed for each winch. To identify the first and the second speed 2 colours are used: gray and red, s.steel, plastic or aluminium version available.

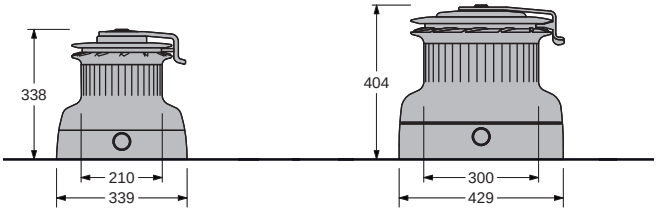
Maxi winches

MOD. **W80.3ST**

THREE REDUCED SPEED MAXI WINCHES → W80.3ST, W90.3ST

Maxi winches for boats more than 20m long. These models are almost always powered with electric motors or hydraulic motors and available only with a chromed drum (**CH**).
All the gears are fitted with roller bearings and the drum works on a very wide diameter roller-ball bearings.
The push-button on the base starts the first gear (the fastest); second and third gear are automatically selected simply by reversing the rotation of the handle.



THREE SPEED WINCHES ↓

Adriatica 21.37m

XT Race winches

Class40 Green Challenge – C. Verardo, Ph. A. Carloni

SELF-TAILING WINCHES: XT RACE SERIES

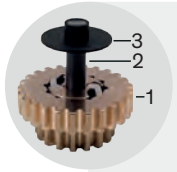
XT-R is the racing winch series obtained from the standard XT series, described above:

- Self-tailing XT system
- Differentiated grip of the drum knurling
- CNC base and skirt
- Fast opening screwed ring
- Axle with low friction PVD finishing

And, in addition to reduce the weight:

- Aluminium stem
- Peek roller bearings for the drum and the main shaft
- Lightened gears and main shaft

To reduce weight, XT series winches are mounted on bearings with peek resin roller on an aluminium stem.



Antal alloy gears (**1**) mounted on low-friction and hard wearing PVD treated axles (**2**); corrosion-proof insulating gaskets (**3**).

The base, machined by the CNC process (produced with computer numeric control machines with no cast components), is lighter and stronger than normal castings.

MOD. **XT44R**

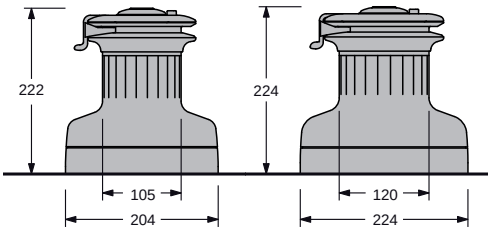
For all others characteristics see tables on previous pages 12-13.

3-speed XTR winches

ONE DIRECT AND TWO REDUCED SPEED WINCHES → XT52.3RD, XT62.3RD

Two new MOD. **XT52.3RD** and **XT62.3RD** with one direct speed for a very fast recovery, plus two reduced speeds for medium and high loads are now available.
The push button on the top cover starts the first direct gear (the fastest), second and third reduced gears are automatically selected simply by reversing the rotation of the handle.



ONE AND TWO REDUCED SPEED WINCHES ↓

MODEL	XT52.3RD	XT62.3RD
POWER P1-P2-P3	4.8 / 15.9 / **52.8**	4.2 / 17.8 / **62.1**

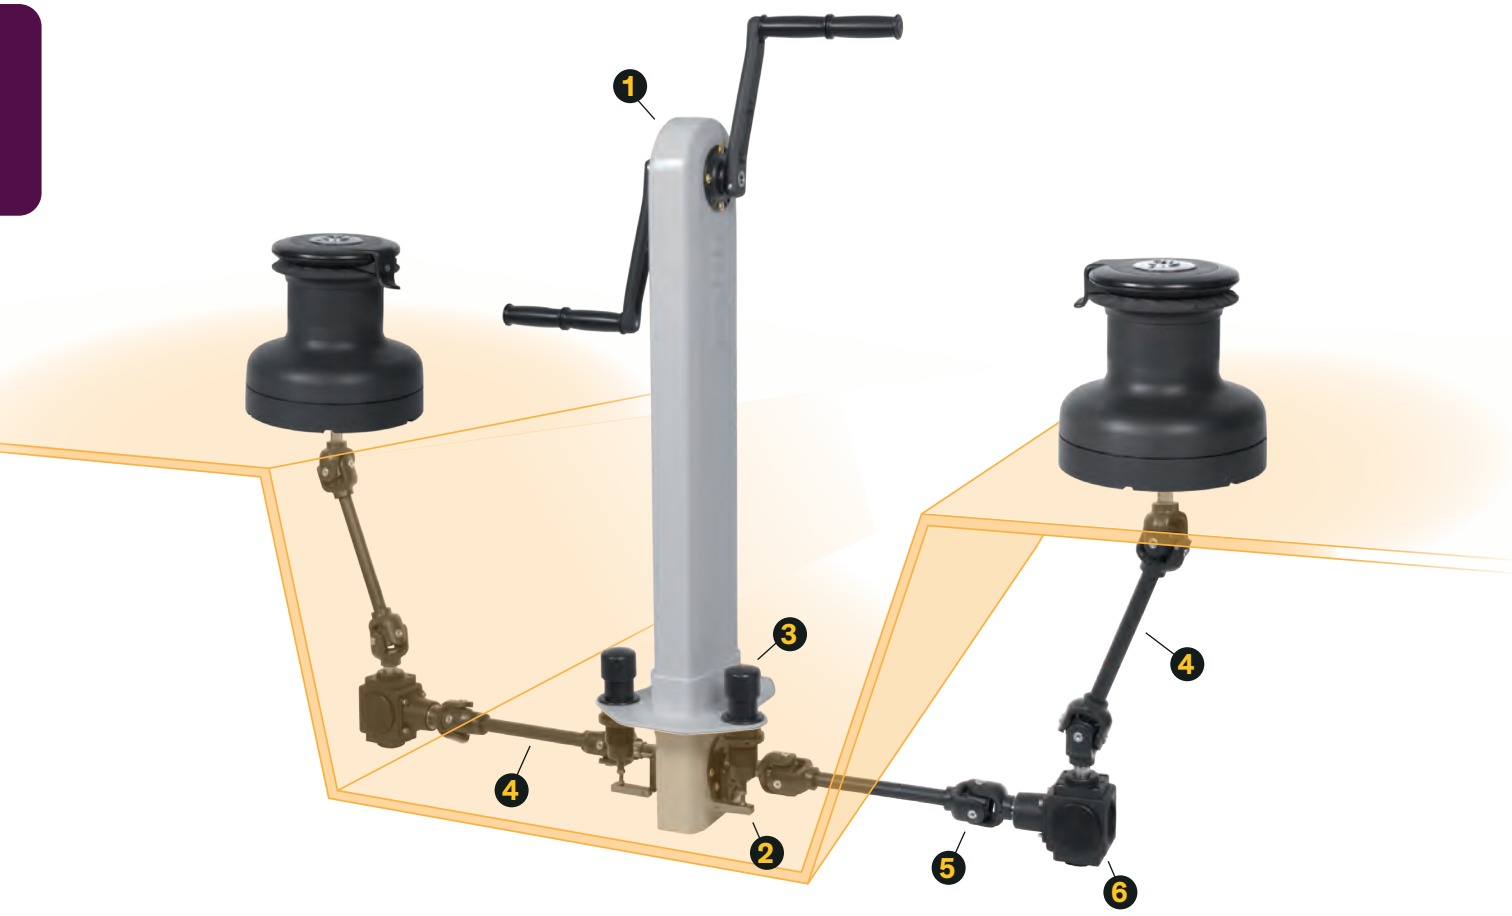
P1, P2, P3: power with the first (fast), second (medium) and third (slow) gear.
S1, S2, S3: recovery speed, the length of line recovered with one turn of the handle in first, second and third gear.

Pedestals for winches



RACE SYSTEM

The Antal pedestal in carbon fibre relies on a belt drive that guarantees a light system. Thanks to the push buttons (**3**), the person operating the handles can control one, two or more winches independently.

Note that the push button does not engage the third speed: this can be still engaged by pushing the winch knob at the base of the winch.

The system also comprises drive shafts (**4**), in customised lengths on request, and gearboxes (**6**). Moreover, the cardan joints (**5**) allow the drive shafts to be angled even to a large degree, thus enabling them to adapt to any hull design.

Farnova 45

1

MOD. C001

CARBON FIBRE PEDESTAL, with belt drive on toothed sheaves that are mounted on steel roller bearings.

2

MOD. C002

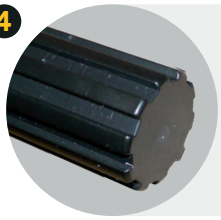
DRIVE-BOX, which transmits the drive from the pedestal to the axle of the single winch.

3

MOD. C003

PUSH-BUTTON, which turns the drive-box on and off, and permits to choose which winch to work on.

4



MOD. C004/xx

ALUMINIUM DRIVE SHAFT with black anodized ribbed end. Customised length on request.

5

MOD. C005

ALUMINIUM UNIVERSAL JOINT with HR steel axles, mounted on both ends of the drive shaft, which enables to incline the shaft by large degrees.

6

MOD. C006

GEAR BOX in right and left hand version, bronze gears on ball/roller bearings, HR steel axles and black anodized aluminium box.

Marina Militare Italiana, Stella Polare – Ph. J.R. Taylor

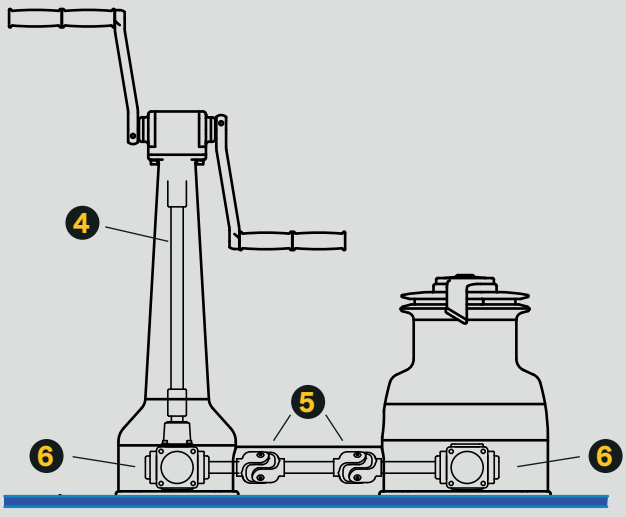
CLASSIC PEDESTAL MECHANICAL DRIVE

This system is entirely run by a **mechanical drive**: drive shafts and bevel gears.

The classic system includes the same components as the race system but with the following differences: the pedestal is hard black anodized aluminium made, with shaft and bevel transmission.

The classic solution is installed entirely above deck with no components under deck.

The shaft from the pedestal to the winch is protected by s.steel casing.



Classic winches

MOD. **W44CHC**

MOD. **XT48CHC**

MOD. **W44BNC**

MOD. **XT48BNC**

CLASSIC SERIES WINCHES

Classic series winches (**CHC**) are supplied not only with a chromed drum, ST disks and ST arm, as the chrome series models (**CH**) described on pages 12-13, but also with a chromed lower skirt, thus being completely chromed.
The chrome-plating is carried out with great care to guarantee maximum durability. First the unit are highly polished, then thickly nickel-plated and finally finisched in chrome.

POLISHED BRONZE

On request, Antal classic winches can be supplied (with drum, ST disks, ST arm and skirt) made of polished natural bronze finish (add **BNC** after the winch model).

Natural bronze winch handle with wooden grip.

Martin Yacht, Anitra 12m SI

Line Driver

Amel 50 – Ph. J.S. Evrard

TRAVELLER CONTROL SYSTEM

The control system is connected to a traveller on a closed circuit and ensures efficient control and a clean layout.

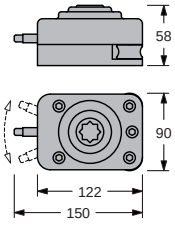
The system uses a self tailing pulley which operates in both direction with a textile “gripping” system that is efficient even if the circuit is not under strain and causes no wear in the rope.

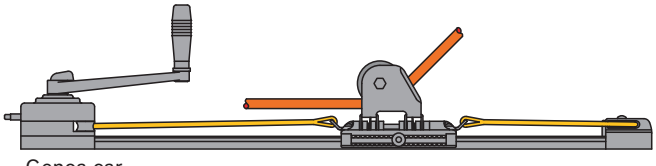
A clutch pin sets the direction in which the traveller moves, or allows for it to be locked in the required position.

The power ratio obtainable with a normal (250 mm) handle is 8 to 1, which is much better than a tackle can offer; moreover, this system has a very limited size and weight.

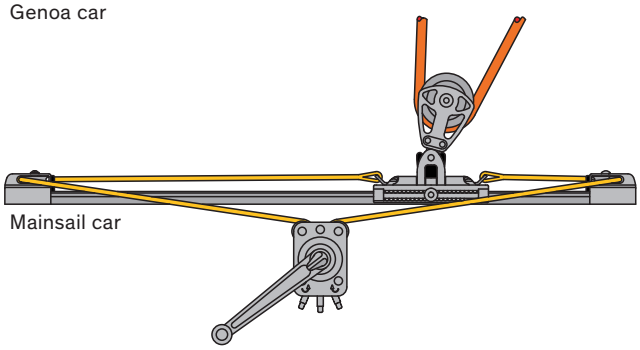
MATERIALS – it is made of hard black anodized aluminium, central rod and ball bearing of AISI 316 stainless steel. A 10 mm line is strongly recommended.

MODEL	240.010
LINE Ø mm	10
POWER	8:1
WEIGHT kg	1.40
SCREWS N x Ø mm	3 × Ø8





Genoa car



Mainsail car

This model has been designed to control the spi-pool car but can also be useful for genoa or main car control.

Spy-Pole slider
range on page 119.

Powered Line Driver

POWERED LINE DRIVER

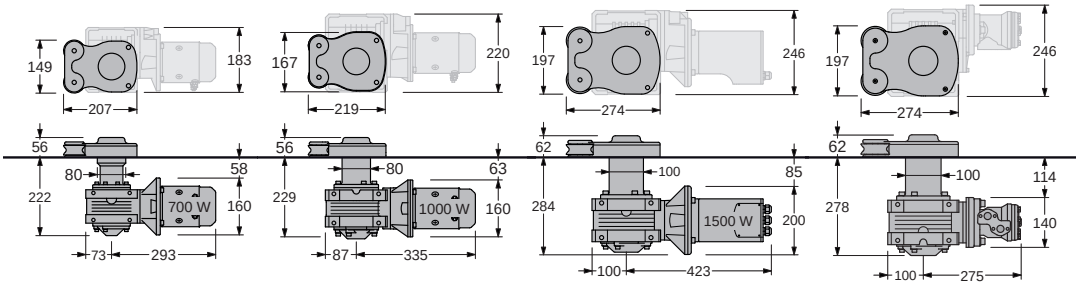
This is a solution done for the control of the main car with a simple “Self-tailing” sheave on the deck, a motor and gearbox under the deck.

Three sizes available with 700, 1000 and 1500 W motors in 12 or 24 Volt version. The largest model is also available in the hydraulic version. This model offers a maximum load on the circuit of 900 kg (100 bar pressure) with a line speed according to the flow rate of the hydraulic system.

MOD. **LD1000**

Nacira 69, A. De Beaufort & G. Verdier – Ph. Maxime Horlaville

For the correct identification of the line-driver, add after the LD model in the tables **/12** or **/24** for 12 or 24 Volt version.



MODEL	LD700	LD1000	LD1500	LD1500HD
MOTOR	Electric 700 W	Electric 1000 W	Electric 1500 W	Hydraulic 25 cc
LINE Ø mm	10 / 12	12 / 14	12 / 14	12 / 14
WEIGHT kg	15	20	22	22
SCREWS N x Ø mm	4 × Ø8	4 × Ø8	4 × Ø8	4 × Ø8
2:1 CAR CONTROL ↓				
MAIN CAR SIZE mm	47 × 230	47 × 330	47 × 430	47 × 430
MAIN CAR MODEL	**614.219**	**614.229**	**614.239**	**614.239**
WORKING LOAD kg	800	1260	1600	1800 *
CAR SPEED m/sec	0.08	0.10	0.12	0.10 **

Car speed and working load are based on a **2:1 car control** as described in the figure on the following page. For a direct 1:1 control, the speed is doubled and the load is halved. Under the maximum load, the speed is reduced by up to even 30%. For cars, see page 154.

* **Pressure** 100 Bar
** **Flow** 25 l/min

The **speed** is calculated with the car not under load; at maximum load the figure should be reduced by 30%. Two **switches**, for the left and the right car movement, a control-box and a safe circuit breaker to complete the electrical system (on page 21).

SWITCHES

CONTROL-BOX

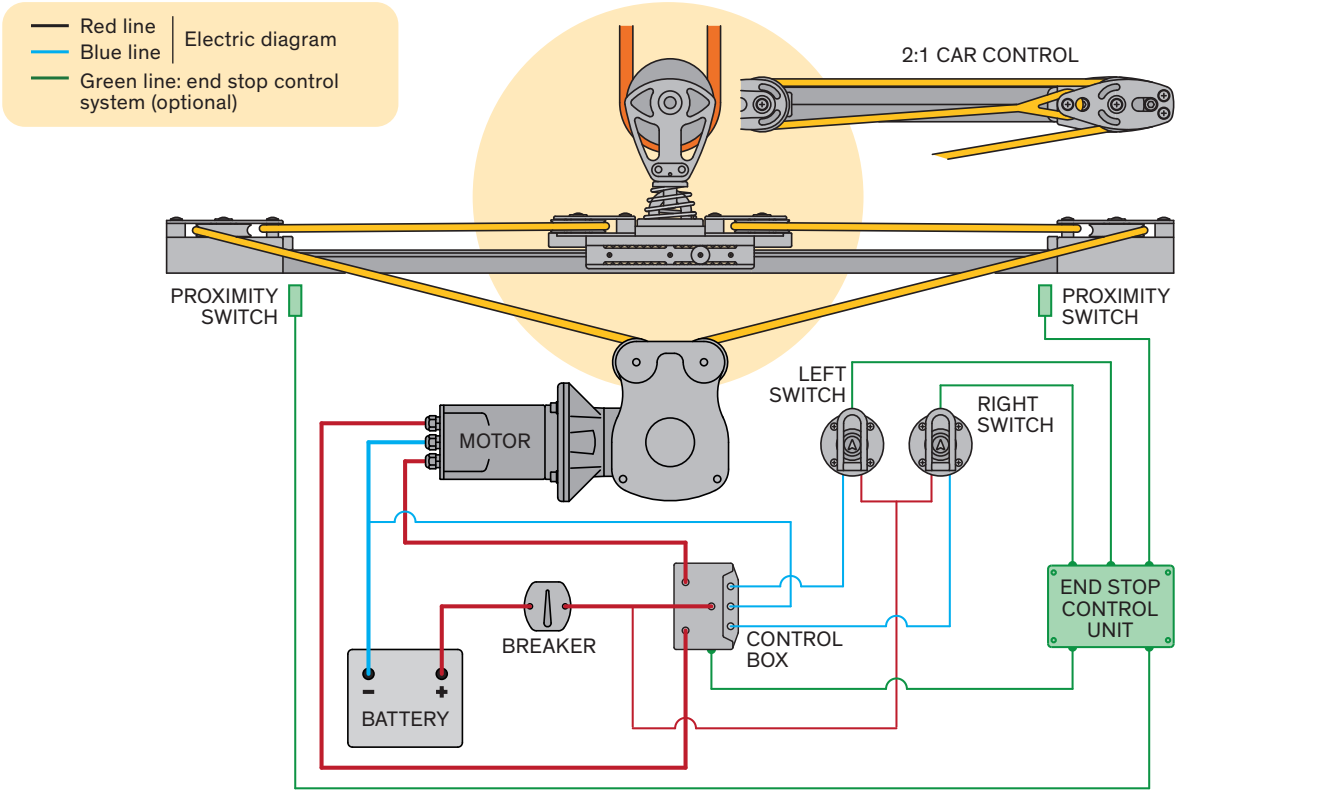
BREAKER

CAR END STOP CONTROL MOD. 6320

To avoid overloads due to wrong operations, a **car end stop control** is available on request: two proximity switches - connected to a control unit - stop the car automatically at the track end. A s.steel plate must be attached to the bottom of the car to allow activation of the proximity switches.

END STOP CONTROL UNIT

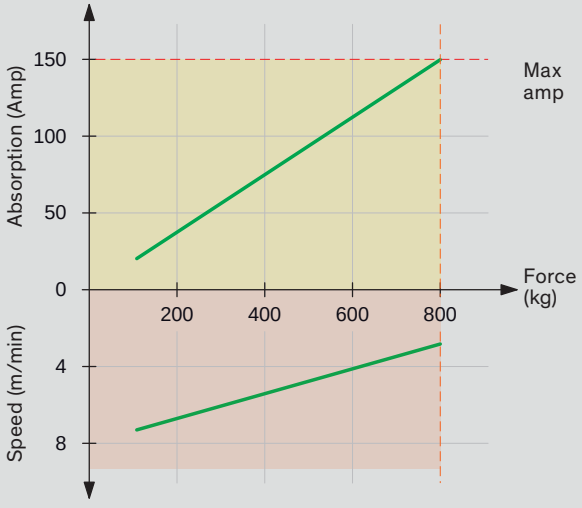
PROXIMITY SWITCHES



POWERED LINE DRIVER: FORCE, ABSORPTION and SPEED

The **force** (pulling load) of the Line Driver, the current **absorption** (Amp) of the motor and the **line speed** are related as shown in the diagrams obtained experimentally with load and recovery tests. For each model, these diagrams clearly show the values of the maximum force, the corresponding speed and the current absorption.

The documentation, including the force-absorption-speed diagrams, is available on request.



Winch handles

WINCH HANDLES
In addition to the extremely light black aluminium handles in two sizes: 200 mm (8 inches) and 250 mm (10 inches), there is also the classic chromed or natural polished bronze solution, always 250 mm long. Three different grips are available: the single, the double and the new “ball-grip”. The handle arm made of forged aluminium with lightening holes is extremely light and resists the heaviest torsion.

The grip is covered with rubber to give a firm hold and runs on two ball bearings to increase its efficiency (single-grip and ball-grip only). All the models are available with or without the lock system which automatically locks the handle on the winch.

To refer to the “no-lock” version add **NL** to the code.

* These models are fitted with the **V-Grip system** that is internationally patented.

V-GRIP SYSTEM CLUTCHES

The V-Grip is an Antal patented system for rope locking. It works with a pressure exerted on 3 sides of the line with a higher friction and, consequently, with a lower pressure, in order not to damage manoeuvres. All Antal clutches, except the Cam 611, are fitted with the V-Grip system.

The V-Grip system has the following characteristics:

1. **Pressure on three sides**. Unlike the usual flat cam, V-Grip is fitted with a V-shaped cam that improves the holding strength without damaging the line cover.
2. **Load distribution**. The curved base-V-Cam pair increases the bearing surface, preventing the load from being concentrated at a critical point.
3. **Line retrieval with closed lever**. Line retrieval can be achieved with the lever closed. The line stops automatically in the new position with no slippage.
4. **Emergency opening**. The line can be released under load without the use of a winch because the Antal mechanism guarantees easy opening even under heavy conditions.

Ocean Tec 50

CLUTCH RANGE

A complete range with 7 different models for lines from 6 to 22 mm. All Antal models, except the Maxi, the QR and the DV-Jammer, are available in single, double, triple and quadruple versions. The Cam 611 and Cam 814 are also available in a silver version with the new ergonomic aluminium lever.

CLUTCH SELECTION

Max loads of the lower table for each model and for different line diameters have been obtained from extensive tests. Tests reveal best results on Dyneema™ with composite Kevlar/Polyester covers, while traditional pure-Polyester covers over a Dyneema™ core prove to have poor resistance. Also “all-Polyester” core/cover versions give excellent results.

V-GRIP SYSTEM CLUTCHES

Cam 611 for line 6 to 10 mm is available in single, double and triple, as well as horizontal. Cam 611 has a box structure in UV-resistant resin with steel reinforcements, an extruded aluminium base, wear-resistant bronze cam mechanism, and stainless steel aligning bushing. The clutch can be completely dismantled for simple maintenance. Line retrieval can be achieved with the lever closed, and the cam mechanism guarantees easy opening even under heavy load.

V-CAM 611 WITH V-CAM

V-Cam 611 is a new model with a V-Cam, for lines from 6 to 8 mm. This new version supports much higher loads: 400 kg on the 6 mm line and 600 kg on the 8 mm. All the features are the same of Cam 611, as shown in the following table.

V-CAM 611 SILVER

Both Cam 611 and V-Cam 611 clutches are now available in the silver series: with a new ergonomic, polished and silver anodized aluminium lever. All the characteristics remain the same as shown in the following table.

Heinrich Werft, Yunikon

V-Cam 814 series

V-Cam 814 – MOD. **509.111**

V-Cam 814 Silver – MOD. **549.111**

V-CAM 814

Three models for 8-10 mm, 10-12 mm and 12-14 mm lines; available in single, double, triple and quadruple. V-Cam 814 has a box-structure in UV-resistant resin with s.steel reinforcements, aluminium base, V-Cam and aligning bushing in Aisi 316. It can be completely dismantled for simple maintenance and repairing. Line retrieval can be achieved with the lever closed. This model is fitted with a large V shaped cam that offers higher holding strength than model V-Grip (page 52) and a new mechanism that guarantees easy opening even under heavy load.

V-CAM 814 SILVER

V-Cam 814 clutches are now available in silver series: with a new ergonomic, polished and silver anodized aluminium lever. All the characteristics remain the same as shown in the following table.

NEW

V-Cam R814 series

NEW

V-CAM R814

The new series of Antal clutches for loads up to 1500 kg. It is fitted with a large V-Shaped cam: the V-Grip Antal system.

Three sizes for 8-10, 10-12 and 12-14 mm lines in five versions: single, double, triple, quadruple and side mounting. Quintuple batteries or more on request.

The new R814 is the improved version of the previous 814 described on page 42 and offers the following features:

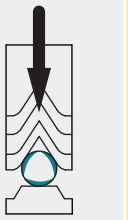
1. **S.steel plates**
Line entry is protected by s.steel guides for the best smoothness.

2. **Cleaning slots**
Spray fresh water through the side openings for cleaning.

3. **Exit ring**
The exit ring is integrated in the base for the maximum resistance to the side loads.

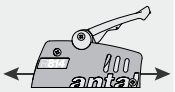
4. **Maneuvers label**
Set of different labels available in English, French and Italian, respectively MOD. **513E**, **513F**, **513I**. Each set includes 23 labels in 3 colors: black, green (right side) and red (left side) for a total of 69 labels.

5. **Upward line direction**
A 3° inclined base to better direct the maneuver to the winch.



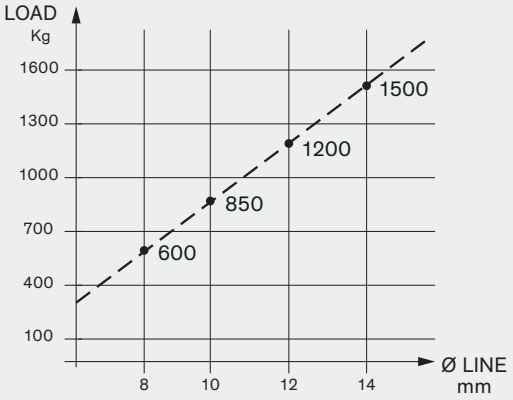
V-GRIP
The V-Grip is an Antal patented system for rope locking. It works with a pressure exerted on 3 sides of the line with a higher friction and, consequently, with a lower pressure, in order not to damage the manoeuvres.

LINE RETRIEVAL
Line retrieval can be achieved with the lever closed. The line stops automatically in the new position with no slippage.



OPENING
The line can be released under load, the Antal mechanism guarantees easy opening even under heavy conditions.

New **low profile** design for the maximum ergonomics.



Max load of the diagram have been obtained from extensive tests for different line diameters.

Higher load values may damage the line cover, not the clutches.

Tests reveal best result on Dyneema™ lines with composite kevlar/polyester cover while traditional pure polyester covers over Dyneema™ cores prove to have poor resistance. Better results for polyester cover with polyester core.

In case of line slippage it may be useful to consider a smaller version. For example, if a 10 mm line slips on a 10-12 model the solution is to use a 8-10 clutch.

Plus and Maxi series

V-Grip Plus – MOD. **508.141**

V-Grip Maxi – MOD. **508.114**

V-GRIP PLUS

3 models for lines from 10 to 16 mm available in single, double and triple.

Hard black anodized aluminium structure and AISI 316 s.steel mechanism, V shaped cam and lever. Easy opening under load for line releasing without the use of winch.

Line retrieval can be achieved with the lever closed, the line stops automatically in the new position with no slippage.

V-GRIP MAXI

5 models for lines up to 22 mm, only single version is available!

Hard black anodized aluminium structure and AISI 316 s.steel mechanism, V shaped cam and lever. Easy opening under load for line releasing without the use of winch.

Line retrieval can be achieved with the lever closed, the line stops automatically in the new position with no slippage.

QR series

NEW → QR14

MOD. **506.101** MOD. **506.121** MOD. **506.141**

QUICK RELEASE DOUBLE V-GRIP

QR is the new Antal clutch that offers the highest holding power and allows you to release a line even under the maximum load. QR lets you open the handle and free the line without the aid of a winch. Three models for 10, 12 and 14 mm line (**SWL – 1600**, **2200** and **3000 kg**) are available in standard version, with mounting base or for side mounting.

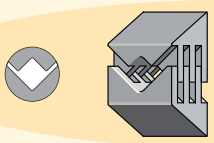
OPENING AND LOCKING

1. The clutch can be opened by lifting the upper handle, which can then be pushed back down.
2. The free-line mark is exposed and the line runs freely, even with the handle closed.
3. To move from free to lock, push up the lock lever. The free-line mark will disappear and the line will be locked. It is possible to recover the line in both the free and locked positions.

DV, DOUBLE V-GRIP

The DV-grip is a locking system based on two opposing V shaped wedges, the result is a 4 sides grip which provides additional benefits over traditional 2-sided grip line stoppers:

- Less line wear
- Higher holding power
- Smaller sizes and lower weight



DOUBLE V-GRIP

MAXIMUM LOAD

The maximum load values are based on load tests performed on Dyneema™ and polyester lines with different covers. Dyneema™ lines with a Kevlar-polyester cover provided much better results than Dyneema™ lines with a polyester cover, which performed poorly.

The test results were even below those of a simple polyester line (polyester core and cover). The maximum load is a limit for the line, not for the clutch. Appropriate safety margins must be observed at maximum loads.

QR clutches are also available for side mounting. The same model can be mounted on either the left or the right side. Screws, washers and nuts in AISI 316 are **included**.

Ice Yacht 52

DV Jammer series

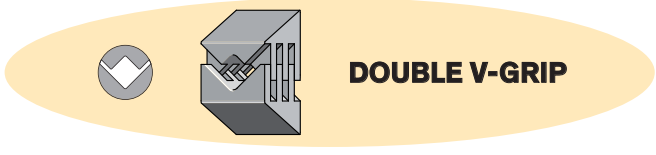
DV JAMMER

The DV Jammer is a line holding device suitable for the extremely high loads of the high-tech Dyneema™ lines as well as exceptional holding power on polyester ropes. Six models, for lines ranging from 8 to 18 mm diameter, are available. This covers a wide range of boats up to around 100 ft in length. DV Jammer sizes 8 and 10 have the same mounting pattern, similarly sizes 12-14 and sizes 16-18.

DV – DOUBLE V-GRIP

The DV-Grip is a locking system based on two opposing V shaped wedges, the result is a 4 sides grip which provides additional benefits over traditional 2-sided grip line stoppers:

- Less line wear
- Higher holding power
- Smaller sizes and lower weight



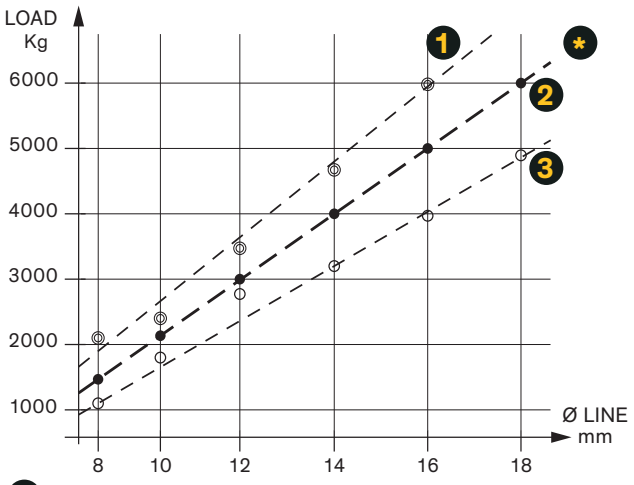
DV is a patent product by Antal.

TEST RESULTS AND MAX LOAD

Test values were obtained on Dyneema™ lines with different covers:

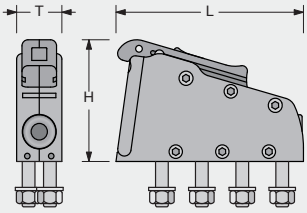
- Dyneema™ with polyester cover
- Dyneema™ with mixed Kevlar-polyester cover

Results shown in the lower graph correspond to the failure of the cover and the resulting core slippage. Dyneema™ line with a Kevlar-Polyester cover provides much better test results than the Dyneema™ line with a Polyester cover which performed poorly, with results even below the simple polyester line (polyester cover and core).



1. Dyneema™ with mixed Kevlar-Polyester cover
2. Max loads
3. Dyneema™ with Polyester cover

* Appropriate safety margins must be considered for the max loads. The suggested maximum load limit is the limit of the line. Above values for max loads are not valid for Dyneema™ lines with a polyester cover or for polyester lines with a lower breaking load value than the recommended maximum load value. Tests with polyester lines (polyester core and cover) show that the limits is the breaking load of the line itself, with values close to our max loads.



STANDARD MODELS AND REMOTE CONTROL

DV STANDARD ↓ MODEL	REMOTE CONT. ↓ MODEL	Ø LINE mm	L mm	H mm	T mm	WEIGHT kg	STUDS N x Ø mm
505.081	505.082	8	126	86	34	0.60	4 × Ø6

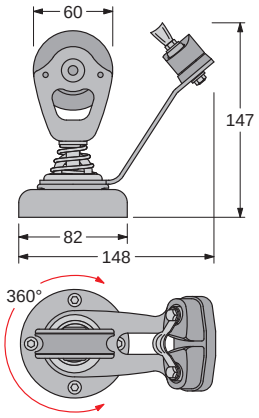
The aluminium base swivels through 360° on single races of Torlon ball bearings.
The system is fitted with 2 × 28 mm sheaves for lines up to 10 mm.

MOD. **522.022**
Fixing – 3 × Ø5 mm screws (**included**)
Weight – 0.23 kg
SWL on the cam cleat – 150 kg

BLOCK AND SERVO CLEAT



The aluminium base swivels through 360° on double races of Torlon ball bearings.
The system is completed with a 60 mm block for lines up to 12 mm.

MOD. **522.140**
Fixing – 4 × Ø6 mm screws (**included**)
Weight – 0.82 kg
SWL on the cam cleat – 200 kg

Stopper deck-blocks

The sheaves are made of high strength resin, fitted with composite fibre bush and side ball-bearings. No maintenance or lubrication is required.

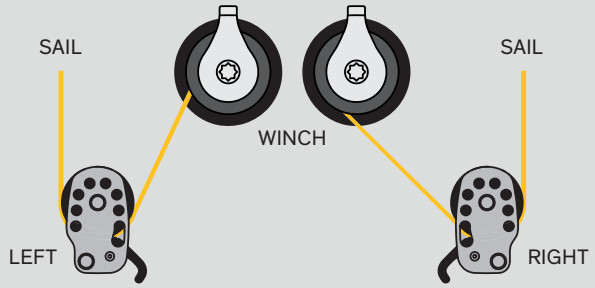
The machined side plates are made of high strength alloy, hard black anodized for wear and corrosion proofing and with all the edges smoothed off.

The aluminium locking cam is fitted on an automatic opening spring: relaxing the sheet is sufficient to open the jammer.

Compact design with the lever fully concealed within the side plates and with recessed fasteners.

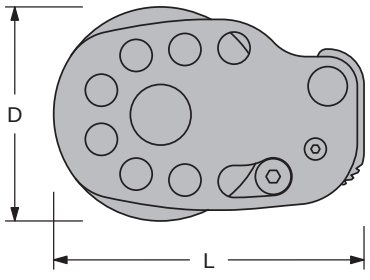
The cam cannot be locked under high loads. It's intended to hold the line temporarily and not under heavy loads.

Left and right versions are available.



Mounting screws, nuts and washers are included.

Saphire, FM27 – Ph. C. Maletto



Left and right versions are available, just add **LEFT** or **RIGHT** to the model code when ordering.

MODEL	Ø LINE mm	D mm	L mm	SWL kg	WEIGHT kg	SCREWS N x Ø mm

MOD. **00301**

MINI BLOCKS 34×6 AND 40×8 SERIES

This series offers extremely high working loads (SWL 34 × 6 = 400 kg, 40 × 8 = 500 kg) while still compact and lightweight. The sheave is made of resin with a double lateral ball-bearing. Cheekplates are made of perfectly polished AISI 316 stainless steel. The high quality materials guarantee a maintenance-free product.

Mini650 Proto, Speedy Gonzales – J. Thompson

OPF series

MOD. **01001**

OPF SERIES

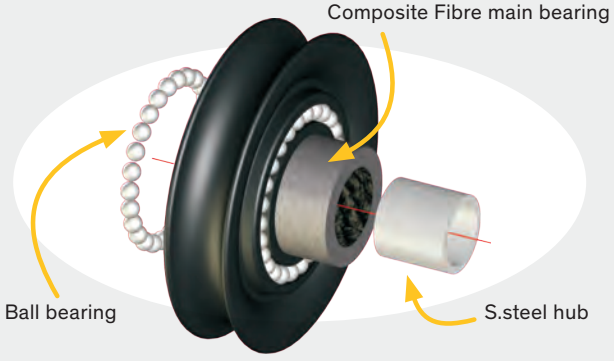
New by Antal the One Piece Frame block, the block without pins or screws, it is a light and strong solution: simply a hard black anodized and teflon coated aluminium frame in one piece.

A complete range from 50 to 140 mm sheaves in single, double, triple, fiddle, and deck versions, for webbing or shackle connection.
Sizes are based on the range of HR shackles available and on their safe working load (SWL).

↓ THE COMPOSITE FIBRE SHEAVE

The resin (aluminium on larger mod) sheave runs on the main Composite Fibre bearing and on a ground s.steel hub: low friction highloads, no lubricant required.

The self-captive side ball bearing reduces the friction and makes disassembling, cleaning and maintenance very easy. Sheaves are supplied with the s.steel hub, they are available separately.

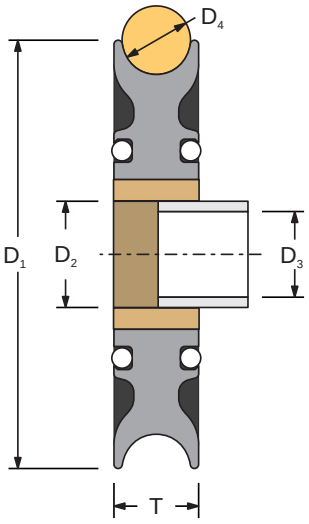


↓ THE HR SWIVEL HEAD

Made in high resistance s.steel, with three positions: swivelling head, longitudinal lock and transversal lock. HR shackles **included**.

↓ THE ONE PIECE FRAME

The one-piece aluminium extruded body is the strongest and lightest solution, no assembling pin rivets or screws and nuts. CNC machined polished, hard black anodized and teflon coated.



SHEAVE	D_1 mm	T mm	MATERIAL	D_2 mm	D_3 mm	D_4 mm	SWL kg	WEIGHT g
04919F	48	18	resin	20	16	15	2200	43

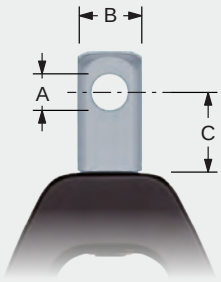
14025A	140	25	aluminium	40	32	20	7000	580

* **Without** Composite Fibre main bearing

SPECIAL HEADS

On request Antal blocks are supplied with special head: long head or Wichard HR snap shackle.

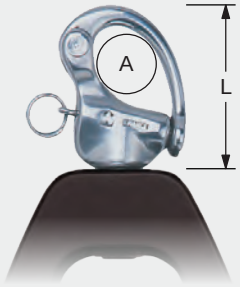
LONG HEAD



MODEL	SHEAVE Ø mm	A mm	B mm	C mm	B.B. CAR SIZE mm
J	60	6	12	12	100
J1	80	8	14.5	15	150
J2	80	10	18	17	190
J1	100			19	
J2	100			25	260

For stand-up connection of ball bearing cars (page 130, 134-137).
To order the block with this special long swivel head, add **J** to the block model code.

SNAP SHACKLE*



MODEL	SHEAVE Ø mm	SWL** kg	BL** kg	A mm	L mm
SN	50	700	1370	16	45
	60				
	70	960	2000	16	45
	80	1280	3600	21	60
	100	2800	7000	26	80

* Snap shackle → this solution is available for single and fiddle blocks only. To order the block with this special snap shackle head, add **SN** to the block model code. AISI 316 snap shackle for size 50 and 60, Wichard HR snap shackles for all the others.

** **SWL** (Safe Working Load) and **BL** (Breaking Load) declared by the manufacturers.

CAM-CLEAT ASSEMBLY

MODEL	CAM CLEAT ASSEMBLY	SHEAVE Ø mm	WEIGHT kg
C	YBA049	50	0.08
	YBA052	60	0.13
	YBA056	70	0.15

It is available for all the 50, 60 and 70 mm diameter models. Adjustable in 3 positions.
To order the block with cam-cleat, add **C** to the block model code.

Amel 50 – Ph. R. Christol

Antal blocks of the OPF series are supplied with shackles: AISI 316 on size 50 and 60 and HR on size 70 and more.
For the breaking (**BL**) and the safe working loads (**SWL**) of the shackles, consider the tables on page 203.

Mainsheet systems

MAINSHEET SYSTEMS

These systems are particularly suitable for the mainsheet control. 2 sizes are available:

- **Size 60** for boats up to 36 ft and lines up to Ø = 10 mm, main sheave with Cam-Cleat Ø = 60 mm, secondary sheave Ø = 50 mm, SWL (safe working load) = 800 kg.
- **Size 75** for boats up to 40 ft and lines up to Ø = 12 mm, main sheave with Cam-Cleat Ø = 75 mm, secondary sheave Ø = 60 mm, safe working load SWL = 1000 kg.

All sheaves are made of HRM resin with 2 races of ball bearings.

MODEL	E6/60	E6/75	E7/60	E7/75	E8/60	E8/75
POWER	6:1		7:1		8:1	
SWL kg	800	1000	800	1000	800	1000
PRIMARY SHEAVE Ø mm	60	75	60	75	60	75
SECONDARY SHEAVE Ø mm	50	60	50	60	50	60

TWO SPEED MAINSHEET TACKLE: 4/8, 4/12 AND 6/18

The particular configuration adopted permits the use of large diameter sheaves which improve performance of the system; it also ensures maximum block orientation capabilities and therefore the possibility to operate on both sides of the boat. Furthermore, this reduces the necessary sheet length. The two speeds are controlled by means of two independent lines.

Use 10 mm line for the first speed and 6 mm line for the second speed.

J-Boats, J80 – Ph. C. Breschi

MODEL	F4/8	F4/12	F6
1st SPEED	4:1	4:1	6:1
2nd SPEED	8:1	12:1	18:1
SWL kg	800	800	1000
SHEAVE Ø mm	60	60	60
TOTAL WEIGHT kg	0.88	0.92	1.54

XXL Blocks

COMPOSITE FIBRE SERIES

The whole composite fibre range uses sheaves on composite fibre bearings and double self-captive Delrin ball thrust bearings. The sheaves are easy to dismantle for cleaning and need no lubrication.

The sides are made of 3571 TA16 light alloy and are thickly anodized to ensure absolute wear-and corrosion proofing, with all the edges smoothed off for better handling.

The nuts and bolts have been replaced with recessed screws and pins, considerably reducing weight and eliminating any projecting parts.

The steel coupling revolves on a fibre washer and can easily be locked in one of two main positions.

↓ HIGH STRENGTH ALUMINIUM SHEAVES

Sizes 150, 180, 220 and 250 mm use thickly anodized aluminium sheaves. The main bearing is made of high-strength composite fibre impregnated with self-lubricating substances. A double lateral Delrin ball bearing makes the sheaves slide perfectly smoothly.

Sheaves are supplied with the s.steel central hub, they are available separately.

Looper series

LOOPER is an ultralight one-piece-frame block provided with a Dyneema™ Snap-Loop for fast, easy and safe connections.

Characteristics

- Hard black anodized one-piece-aluminium frame
- Resin sheave on composite fibre bushing and double side ball bearings
- Dyneema™ Snap-Loop

THE ONE PIECE FRAME

The one-piece aluminium extruded body is the strongest and lightest solution, no assembling pin rivets or screws and nuts.
CNC machined, polished, hard black anodized and teflon coated.

THE COMPOSITE FIBRE SHEAVE

The resin (aluminium on larger mod) sheave runs on the main Composite Fibre bearing and on a ground s.steel hub: low friction, high-loads and no lubricant required.
The self-captive side ball bearing reduces the friction and makes disassembling, cleaning and maintenance very easy.
Sheaves are supplied with the s.steel hub, they are available separately.

For a “tied looper” the block without Snap-Loop is also available, the line is not included.

For this version without snap-loop replace **LS** with **LL** in the model number.

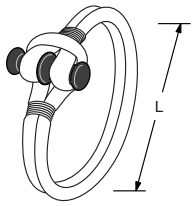
E.g.
LS1080 is the 80 mm Looper with Snap-Loop,
LL1080 is the same without Snap-Loop.

SNAP LOOP AND DOG-BONE FASTENINGS

Dyneema™ Snap Loops including “Dog-Bone” aluminium fastenings are available.
Dog-Bone fastenings are also available separately so that Loops of any length can be prepared.

SNAP LOOP

These snap loops are obtained with a spliced Dyneema™ line without cover and an aluminium dog-bone.



MODEL	DYNEEMA™ Ø mm	BL kg	SWL* kg	L mm	WEIGHT g
LS2060	4	3000	1000	100	11
LS2070	5	5200	1600	110	20
LS2080	6	6600	2200	125	44
LS2100	8	11000	3500	160	81

DOG-BONE

You can prepare your special snap loop using Antal aluminium dog-bones, separately available.

MODEL	FOR DYNEEMA™ Ø mm	Ø mm	L mm	WEIGHT g

A316 s.steel series

CLASSIC LINE

This stainless steel series, with a traditional design, is conceived especially for classic boats. The line includes 6 different sizes with diameters from 65 to 180 mm and Safe Working Load up to 9000 kg.

Perfectly polished A316 stainless steel cheekplates and accessories, fully rounded corners for greater manageability, nuts and bolts replaced by pins and recessed screws to eliminate any protruding parts.

Each size is available in numerous versions as described in the following pages.

CAM CLEAT

All models can be supplied with cam cleat. Just add **C** to the model code when ordering.

SHEAVES

Resin or aluminium sheaves in larger models are easy to dismantle and work on a main composite fibre bearing and two side ball bearings (self-captive).

Hollow Pin deck-blocks

HOLLOW PIN DECK BLOCK 75, 90, 120 mm

The sheave rotates on a hollow pin with the line passing through the pin's centre. This type of arrangement reduces the height of the line off the deck, and the side loads on the block.
The line position and its direction to the winch does not change, even when the sheave is articulated off-centre.Body completely made in polished s.steel. Sheave on Composite Fibre bearing and two side ball bearing.

Mounting screws, nuts and washers are **included**.

SHB

NEW

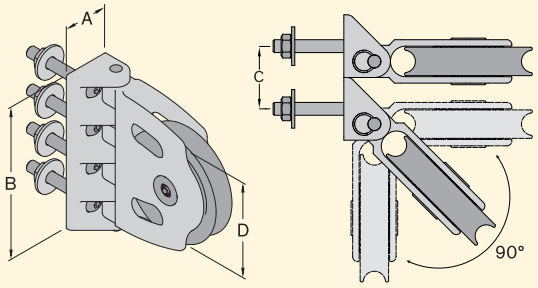
SWIVELLING HALYARD BLOCKS

This special block has been designed to direct the halyards from the mast base to the winches.

Compared to the known “hollow pin” models, it offers two advantages:

- the halyard exit is lower (closer to the deck).
- the narrow base allows the assembly of more blocks in the narrow space of the mast base.

There are actually three sizes available (see the following tab).



MODEL	00619	00819	01019
SIZE (D) mm	60	80	100
SWL kg	1300	2200	3500
BASE (A x B) mm	35 × 102	40 × 120	45 × 150
SCREWS (N x Ø) mm	2 × Ø8	4 × Ø8	4 × Ø10
WEIGHT* g	430	530	920
FOR LINE mm	12	14	16
C mm	35	39	45

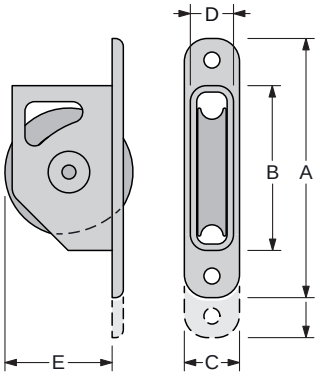
* Fixing screws are **included**

Sunreef Yachts, Sunreef 60

Mast blocks

MAST BLOCKS

12 different sizes with diameters from 40 to 140 mm for working loads (**SWL**) up to 9000 kg. Hard black anodized aluminium frame with insulating washers for corrosion protection. Resin sheaves (aluminium sheaves for 100, 120 and 140 mm only) with composite fibre main bearing (not on size 40) and double side self-captive ball bearing.



MOD. **00818Z**

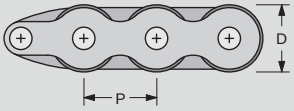
MOD. **D550**

MOD. **D540**

MOD. **D530**

ORGANIZERS (Ø = 40, 50, 60 AND 70 mm)

Groups of 2 to 6 sheaves in 4 diameters of 40, 50, 60 and 70 mm. The 40 and 50 mm sheaves are manufactured in high-strength resin with a double side ball bearing. The 60 and 70 mm sheaves are manufactured in aluminium, hard black anodized, with a main composite fibre bearing and 2 side ball bearings. Mounting screws, nuts and washers are included. These new organizers do not disassemble after tacking off the screws.



SHEAVE SWL
The maximum Safe Working Load on the single sheave.

ORGANIZER SWL
The maximum Safe Working Load on the organizer.

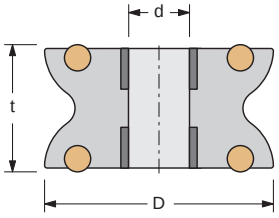
Tulip series

TULIP SERIES SHEAVES

The Tulip sheaves are fixed sheaves that do not turn in the direction of manoeuvres since they accept quite different lead angles. The choice of a Tulip sheave instead of a revolving block comes from the need to reduce bulk and weight.

The sheave, with an axial bearing in composite fibre and large round bearings (self-captive) in Torlon for side loads, is in anodized and Teflon coated aluminium and can handle very high loads.



MODEL	D mm	Ø LINE mm	d mm	t mm	SWL kg	WEIGHT mm
801.045*	45	12	12	31	1000	0.04

Maxi Dolphin 75, Karma – Ph. F. Ferri

Tulip organizers

HORIZONTAL TULIP ORGANIZERS

With Tulip sheaves organizers can also be made. Batteries from 2 to 6 sheaves are available, with diameters 45 and 60 mm.
The 45 mm sheaves are in high resistance resin, with a “self-captive” double side ball bearing. The 60 mm sheave, with an axial bearing in composite fibre and large round bearings (self-captive) in Torlon for side loads, is in anodized and Teflon-coated aluminium and can handle very high loads.

Mounting screws, nuts and washers are **included**.

MOD. **T540**

Mainsail blocks

CLEW BLOCKS

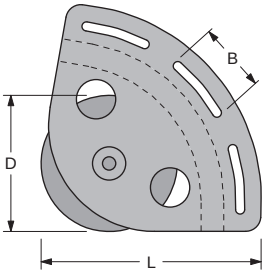
Solution designed to solve the connection of a sheave to the furling mainsail clew efficiently.

The block is contained within the size of the sail, thus allowing a larger surface of the mainsail to be used.

The choice of materials guarantees the least weight as well as a very good mechanical resistance to the environment. Particular care has been taken over the ease of connection which is obtained by normal “webbing”. This ensures moreover a very good distribution of the load on the sail.

MATERIALS – Cheek plates are made of anodized aluminium.
Also polished s. steel solutions are available on request.

MODEL	Ø LINE mm	D mm	L mm	B mm	SWL kg	WEIGHT kg
991.073	14	70	112	3 × 36	1000	0.23
991.093	16	90	145	3 × 46	2000	0.45
991.124	18	120	190	4 × 46	3000	1.04
991.154	20	150	225	4 × 52	4000	2.05
991.184	24	180	265	5 × 52	8000	2.65



REEF BLOCKS

The blocks are connected to the leech of the mainsail with webbing, and reduce point loading on the mainsail when reefing. The small diameter sheaves are suitable to very high loads.
The center hole can be used as a safety connection to the boom when reefed. The small version (D = 50 mm) is for boats to 50 ft, larger (D = 120 mm) for boats to 100 ft.

If a larger sheave is required and if higher weight and larger sizes are acceptable, then the clew blocks described above can be considered.

MODEL	Ø LINE mm	D mm	L mm	B mm	Z mm	SWL kg	WEIGHT kg

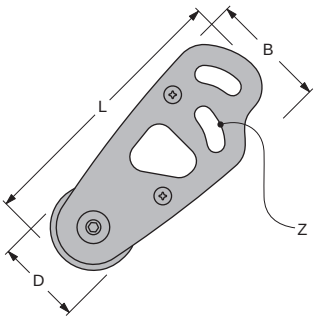
994.125	28	120	357	170	60	10000	2.90



Special blocks

TWIN HALYARD BLOCKS

THB

The Twin halyard block is specially made for a 2 to 1 main halyard. The very small sheave is aluminium made with a Composite Fibre bushing. The body is completely made in “High-resistance” stainless steel Nitronic 50. 4 sizes for breaking loads from 2600 to 10000 kg, for boats up to 70 ft.

HIGH LOAD BLOCKS

HLB

These small and light blocks are the best solution for very high loads when sliding is not important.

The very small sheave is fitted with a Composite Fibre bushing. The one piece frame is made for line connection.

The 3 blocks (D = 30, 40 and 55 mm) give an 8 to 1 system. This system is specially designed for the backstay or the boom-vang.

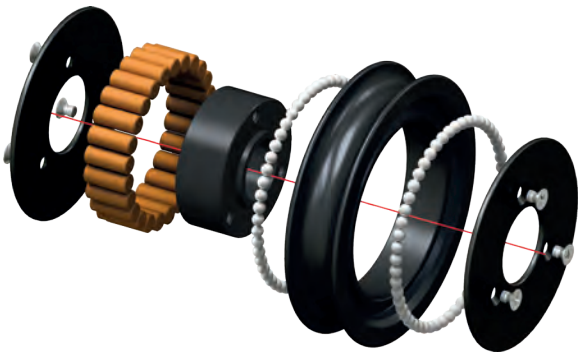
Roller bearing sheaves

ROLLER BEARING SHEAVES

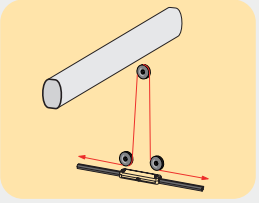
In some cases, it is important to reduce the friction of the blocks as much as possible, even if this leads to a reduction in the maximum loads. When compared with the composite fibre bushing version, the roller bearing shaves offer a lower resistance but a greater smoothness.
Antal offers a range of roller sheaves, which can replace the traditional sheaves on the OPF series blocks, and a range for the Looper series. The main characteristics of these sheaves are described in the following tables.

FRL is the Free Rolling Load: for good sliding (low friction), the FRL value must not be exceeded.

ML is the Maximum Load: loads higher than the ML cause permanent deformations of the rollers and therefore damage the bearing**.**



To order OPF or Looper blocks with roller bearing sheaves just add **R** in front of the model code.



A situation in which it is advisable to consider blocks with roller sheaves is that of the mainsail sheet with a T shape because, in this case, an excessive friction of the blocks makes the car movement very difficult.

Blocks and soft links

BLOCKS AND T-LOCK

Blocks designed to be linked with Dyneema™ loops as Looper Blocks (see page 80) can be tied to a special Antal swivelling toggle and then fitted into the new Antal T-Lock base (see page 185). The result is a removable deck block that rotates in any direction of the load.

BLOCKS AND DYNEEMA PAD-EYE

Blocks provided with a Dyneema™ snap-loop as Looper Blocks (page 80) or Snatch Looper (page 108) may be connected to the proper Dyneema™ pad-eye (page 184).

Looper + Dyneema™ Pad-Eye

SnatchLooper + Dyneema™ Pad-Eye

An easy and safe way to tie the block down is with multiple wraps of thin **Dyneema™ line** (E.g. size 3 mm) then splice the two ends and wrap everything with a thin wire (e.g. size 1 mm).

Consider that 8 wraps of well spliced 3 mm Dyneema™ without cover reach a breaking load higher than 6 tons.

The link in the picture is obtained with 2.60 m of 3 mm Dyneema™ line and a block size 80 mm (MOD. **LL1080**).

Barber blocks

BARBER BLOCKS

The new Antal Barber Block is a snatch block with a **ring head**, it provides an immediate entry of the sheet (the cheekplate revolves around the sheave axle allowing the block to open) and an easy **2:1 control** (a line through the ring allows the control of the block height). A safety ball prevents the revolving from accidental opening and an adjustable screw can set the ball in fully locked position. A small becket to attach a line for hanging the block is present. Rubber covers to protect the deck from bumps. Aluminium sheave with composite fibre bushing and two side ball bearings.

CAR CONTROL

To regulate the car position, tackles with 2:1 and 3:1 purchase can be produced. A special end fitting with 1 or 2 sheaves can be mounted on the track and one block connected to the car.

CAR CONTROL 2:1

CAR CONTROL 3:1

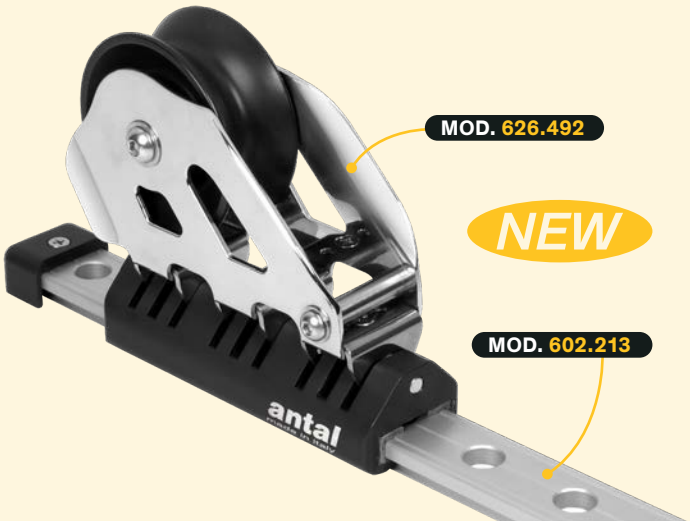
MOD. 909.502	50 mm block connected to the car
MOD. 949.502	50 mm block with becket connected to the car
MOD. 690.351	Black aluminium end fitting with one 50 mm sheave
MOD. 690.352	Black aluminium end fitting with two 50 mm sheave

MOD. 626.492 → MAXI GENOA SLIDER — For boats up to 60 ft

The new genoa slider MOD. **626.492** has a stronger and more rigid steel structure, suitable for boats up to 60ft, fitted with a wide sheave 100 mm diameter. It is done for the 40x8 T-Track MOD. **602.213** and we recommend the use of the double pin stop MOD. **691.722B**.

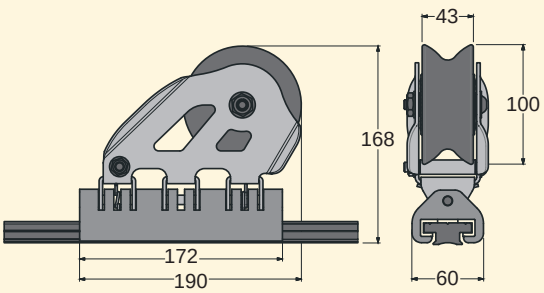
WEIGHT – 2.12 kg
SWL – 4800 kg



MOD. 691.722B

DOUBLE STOP PIN: for the double stop pin with alu slider the 50 mm hole spacing track (MOD. **602.213**) is necessary.

STOP PIN Ø – 14 mm

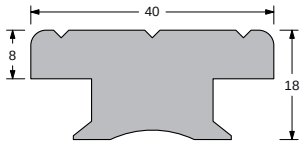


Double 40x8

Genoa cars

DOUBLE 40×8 GENOA CARS SHEAVES 120, 150, 180 mm

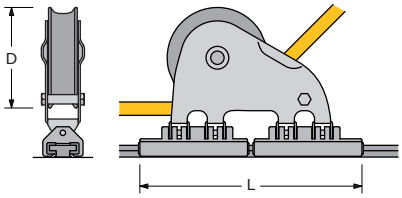
The double 40×8 genoa cars are made for maxi yachts (larger than 60 ft), they run on 40×8 T-Track (see page 116).



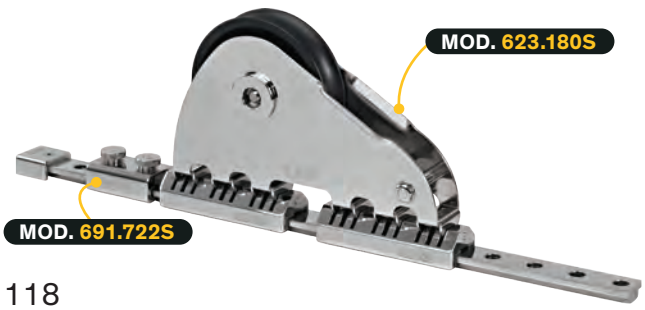
Two hard black anodized aluminium sliders (add **B** after the model number) or two polished s.steel sliders (add **S** after the model number) running on nylon guides are connected with a revolving (±50°) link structure. The sheave, with a wide sections for a double sheet, is fitted with a main Composite Fibre bearing and two side self-captive ball bearings.

Sunreef 60

MODEL	D mm	L mm	SWL kg	WEIGHT kg
623.120B	120	330	5000	3.10
623.150B	150	330	6500	4.25
623.180B	180	375	9000	6.20



All the above double cars are available with stainless steel sliders. The double stop pin and the T-Track are also available in s.steel. Substitute **S** for **B** in the model number.



STOP PIN

A special double stop pin (Ø14 mm) is available to lock the car in position on the track:

MOD. **691.722B** – Hard black anodized aluminium
MOD. **691.722S** – Polished s.steel

With the double stop pin the 50 mm hole spacing track (MOD. **602.213**) is necessary.

Spi-pole sliders

SPI-POLE SLIDERS

This “long version” of Spi-Pole sliders is designed to reduce the side loads and torsion on the track. They slides on fibre inserts to reduce the friction to a minimum.

Made for standard 32×6 and 40×8 T-Tracks, they are always fitted with one upper and one lower block with becket for the control line. Single and double sheave end fitting for 2:1 and 3:1 systems are available.

Antal offers a hard black anodized and teflon coated T-Track that gives a lower friction coefficient.

T-Tracks

T-TRACKS

Antal produces three sizes of T-Tracks: 26×4, 32×6 and 40×8. T-Tracks are available in the three versions silver aluminium, hard black anodized aluminium and s.steel, all with 50 and 100 mm hole spacing.

On request, track will be machined with rounded ends and then anodized. Moreover, 32×6 and 40×8 sizes are also made with holes for automatic locking of the slider, in hard black anodized version.

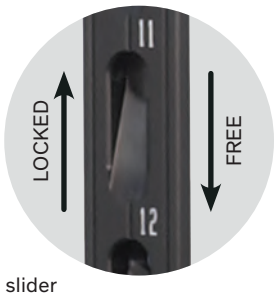
Structures, Pogo40 S3

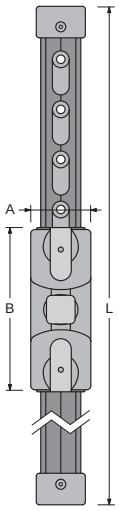
Halyard system

HALYARD SLIDER

The “halyard slider” has been specifically planned for wire halyards and for those halyards which are subject to such high strain as to preclude use of a stopper. This solution permits easy adjustment and secure locking of halyards.

Numbered slider positions





AUTOMATIC TRACK

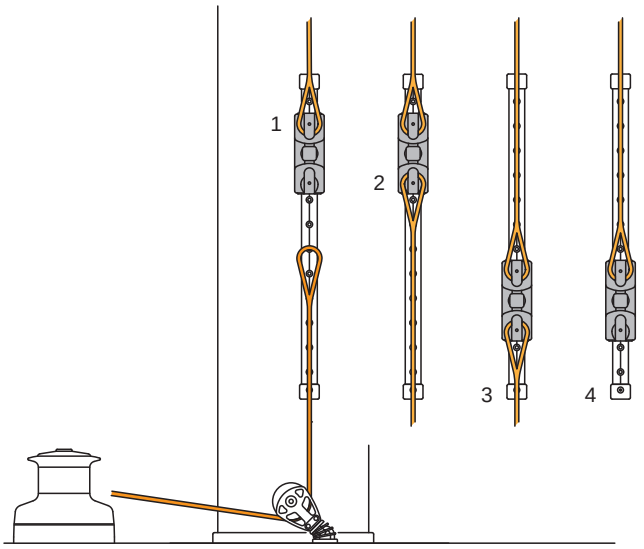
The special shape of the holes allows the car moving with the stop pin on and the automatic car lock in the new position.

THE COMPLETE SYSTEM INCLUDES

- Hard black aluminium T-Track automatic version, with fixed length and with numbered positions of the slider, positioning holes spacing = 50 mm, fixing screws spacing = 100 mm.
- The halyard slider with the 2-positions stop-pin: locked and automatic insertion.
- 2 simple aluminium end fittings for ‘T’ track.

Also automatic tracks of any length, up to 6 m, are available. In this case, the positioning holes are not numbered (32×6, MOD. **602.312** – 40×8, MOD. **602.313**).

ADJUSTING AND BLOCKING THE HALYARD



1 – Hook the halyard to the slider
2 – Connect the winch
3 – Put the halyard under tension and lock it in place
4 – Free the slider from the winch

* Car with double stop-pin

Outhaul sliders

OUTHAUL SLIDERS

This slider runs on self-lubricating HS fibre enabling it to deal with heavy work loads while remaining compact; it also provides low friction running and easy manoeuvring.
The sail connection, which is made of s.steel and revolves, reduces the height of the sail above the boom to a minimum.

Standard T-Tracks, sizes 32×6 and 40×8, are used, with black anodized finish and 50 mm hole spacing. The car runs on self-lubricating HS fibre and with hard black anodized track.

FOR BOATS UP TO 48 ft
→ **32×6** T-Track

FOR BOATS UP TO 70 ft
→ **40×8** T-Track

Su Marine, In Love

Outhaul cars

4RACE Furling main

OUTHAUL CAR WITH SHEAVE

A ball bearing car is necessary for the outhaul of a furling main sail.

Two sizes: 190 mm car with a 60 mm sheave and 260 mm car with a 90 mm sheave, both on Antal 4Race 21×31 tracks.

A special clew-block completes the system.

	↓ CAR					↓ CLEW BLOCK	
	MODEL	LENGTH mm	SHEAVE Ø mm	SWL kg	WEIGHT kg	MODEL	SHEAVE Ø mm
FOR BOATS UP TO 48 ft	4190H	190	60	1900	0.85	991.093	90
FOR BOATS UP TO 56 ft	4260H	260	90	2800	1.36	991.124	120

OUTHAUL CAR – DIRECT CONNECTION

This simple solution reduces the load on the car but increases the tension of the line.

Three sizes with cars 110, 150 and 190 mm long, on Antal 4Race 21×31 tracks.

In this case too a special clew block completes the system.

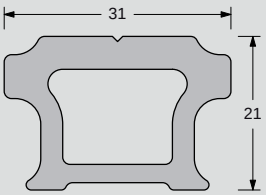
	↓ CAR				↓ CLEW BLOCK	
	MODEL	LENGTH mm	SWL kg	WEIGHT kg	MODEL	SHEAVE Ø mm
FOR BOATS UP TO 40 ft	4110SH	110	1000	0.37	991.073	75
FOR BOATS UP TO 48 ft	4150SH	150	1400	0.48	991.093	90
FOR BOATS UP TO 56 ft	4190SH	190	1900	0.70	991.124	120

TRACK

Two track models are available for the cars described on this page.

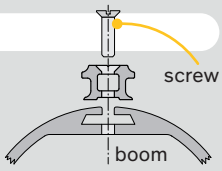
For both MOD. **4510** and **4560**:

FIXING SCREWS – Ø8 mm
HOLE SPACING – 100 mm
WEIGHT – 0.77 kg/m
END-FITTING – MOD. **4271**



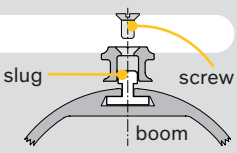
MOD. 4510 → DIRECT MOUNTING

The track is directly screwed to threaded holes on the boom.



MOD. 4560 → SLUG MOUNTING

The track is screwed to the slugs. Slugs are custom made to fit the groove of the boom.



Classic s.steel for genoa

32×6 GENOA CAR	**L** = 132 mm	**ALUMINUM SHEAVE** = 60 mm	**SWL** = 2800 kg
40×8 GENOA CAR	**L** = 160 mm	**ALUMINUM SHEAVE** = 75 mm	**SWL** = 3800 kg

Antal offers a complete series of cars for genoa and mainsail with tracks and accessories completely made in 316 polished s.steel. Particularly designed for classic boats.

Two sizes: with 32×6 and 40×8 s.steel T-tracks. 50 mm sheaves for all cars control.

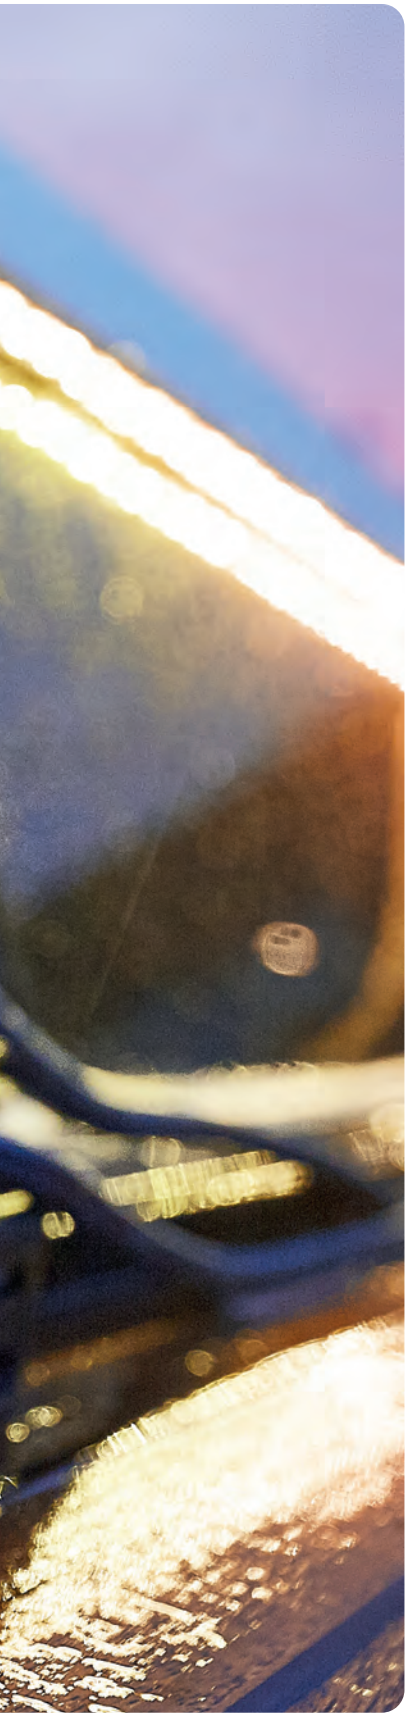
antal

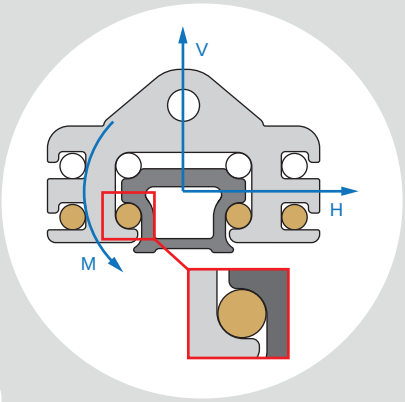
Ball bearing cars



Ball bearing cars

4RACE

- Higher efficiency and smoother running.
- Better load resistance to vertical (**V**), horizontal (**H**) and torsional (**M**) loads.
- Higher safety margin as the car will remain on the track even after ball bearing failure (overload).
- Travellers are fitted with 2 Torlon ball circuits (lower) and 2 Delrin ball circuits (upper).
- Single double and triple control sheaves, with or without becket, can be fitted on the car.
- One-piece extruded body.
- The traveller, the track and all components are extruded in high strength alloy and hard black anodized. (Steel parts: AISI316)
- Side windows for easy maintenance and ball bearing cleaning and/or replacement.
- Standard shackle or special “stand-up” joint.



V – Vertical load
H – Horizontal load
M – Torsional load

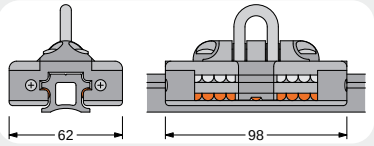
This car is fitted with 54 Delrin + 54 Torlon balls.

WEIGHT – 0.23 kg
SWL – 820 kg



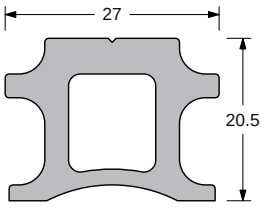
MOD. 601.121 → STANDARD TRACK

Tubular hard black anodized aluminium extrusion.

FASTENERS – 6 mm screws / 100 mm hole spacing
WEIGHT – 0.69 kg/m
MAX LENGTH – 6 m

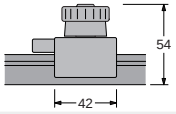
MOD. 601.221 → STOP PIN TRACK

As the above model but with holes (50 mm spacing) for the stop pin.



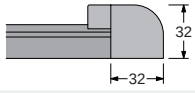
MOD. 691.421 → STOP PIN

Aluminium slider on nylon inserts and AISI 316 s.steel pin.
The stop pin needs to be fitted on the MOD. **601.221** track.



MOD. 4261 → SIMPLE END FITTING

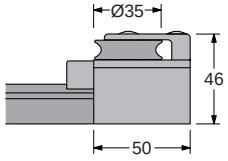
Plastic made, mounted with a 6 mm screw.



MOD. 4262 → END FITTING WITH ONE SHEAVE

High strength resin made with one Ø35 mm sheave.
Completed with a shock proof rubber.

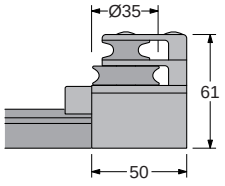
WEIGHT – 0.08 kg
SCREWS – 3×Ø5 mm



MOD. 4263 → END FITTING WITH ONE SHEAVE AND BECKET

High strength resin made with one Ø35 mm sheave.
Completed with a shock proof rubber.

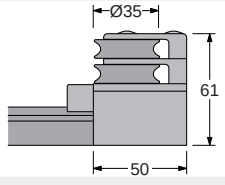
WEIGHT – 0.10 kg
SCREWS – 3×Ø5 mm



MOD. 4264 → END FITTING WITH TWO SHEAVES

High strength resin made with two Ø35 mm sheaves.
Completed with a shock proof rubber.

WEIGHT – 0.10 kg
SCREWS – 3×Ø5 mm

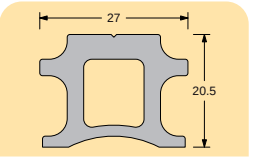


MOD. 4266 → END FITTING CAM-CLEAT

This cam-cleat revolving in 3 different positions can be fitted on the end fitting with one or two sheaves.

Main cars

4RACE Size 100



Information about the track on page 129.

MAIN BALL BEARING TRAVELLER, SIZE 100

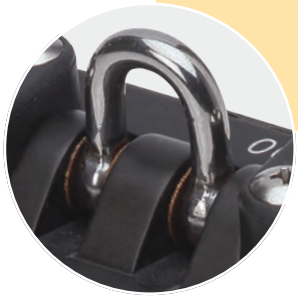
This traveller is 98 mm long and 62 mm wide. The weight is 0.23 kg and the working load = 820 kg. The sheaves for the car control are D = 35 mm. The complete systems includes 1.5 m long track. The sheet block (OPF 60, page 66) is **not included**.

The blocks in the OPF series to be mounted on the 4Race cars must have a special long swivel head as described on page 63; add **J** to the block model code.

The traveller is fitted with a special “stand-up” connection for Antal block size 60 mm and includes the “stand-up” rubber.

For boats up to 33 ft

MOD. **4100**



MOD. **4100SH**
The same traveller is also available with a 6 mm shackle (for this case add **SH** to the model number).

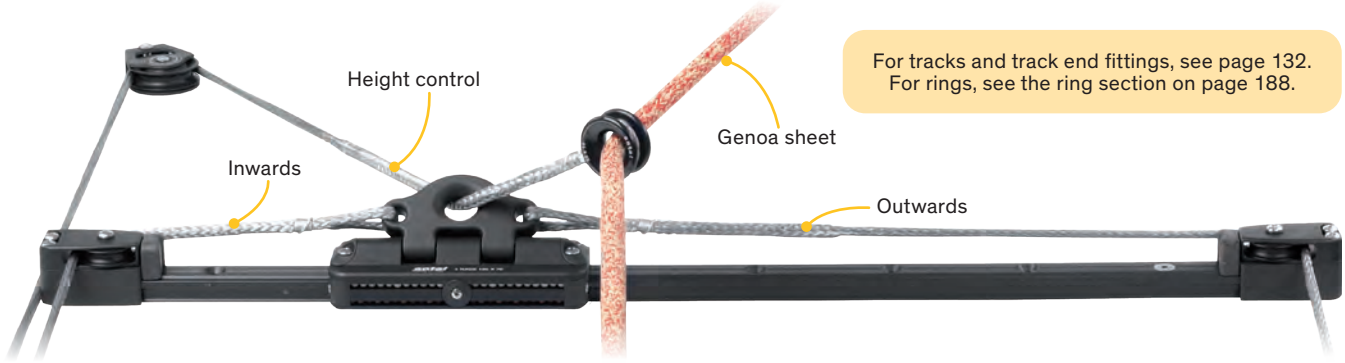
TRANSVERSAL CARS FOR GENOA SHEET

The transversal car is fitted with a direct control for car moving outwards and inwards.
A ring, through which the sheet runs, allows the height control of the genoa sheet.



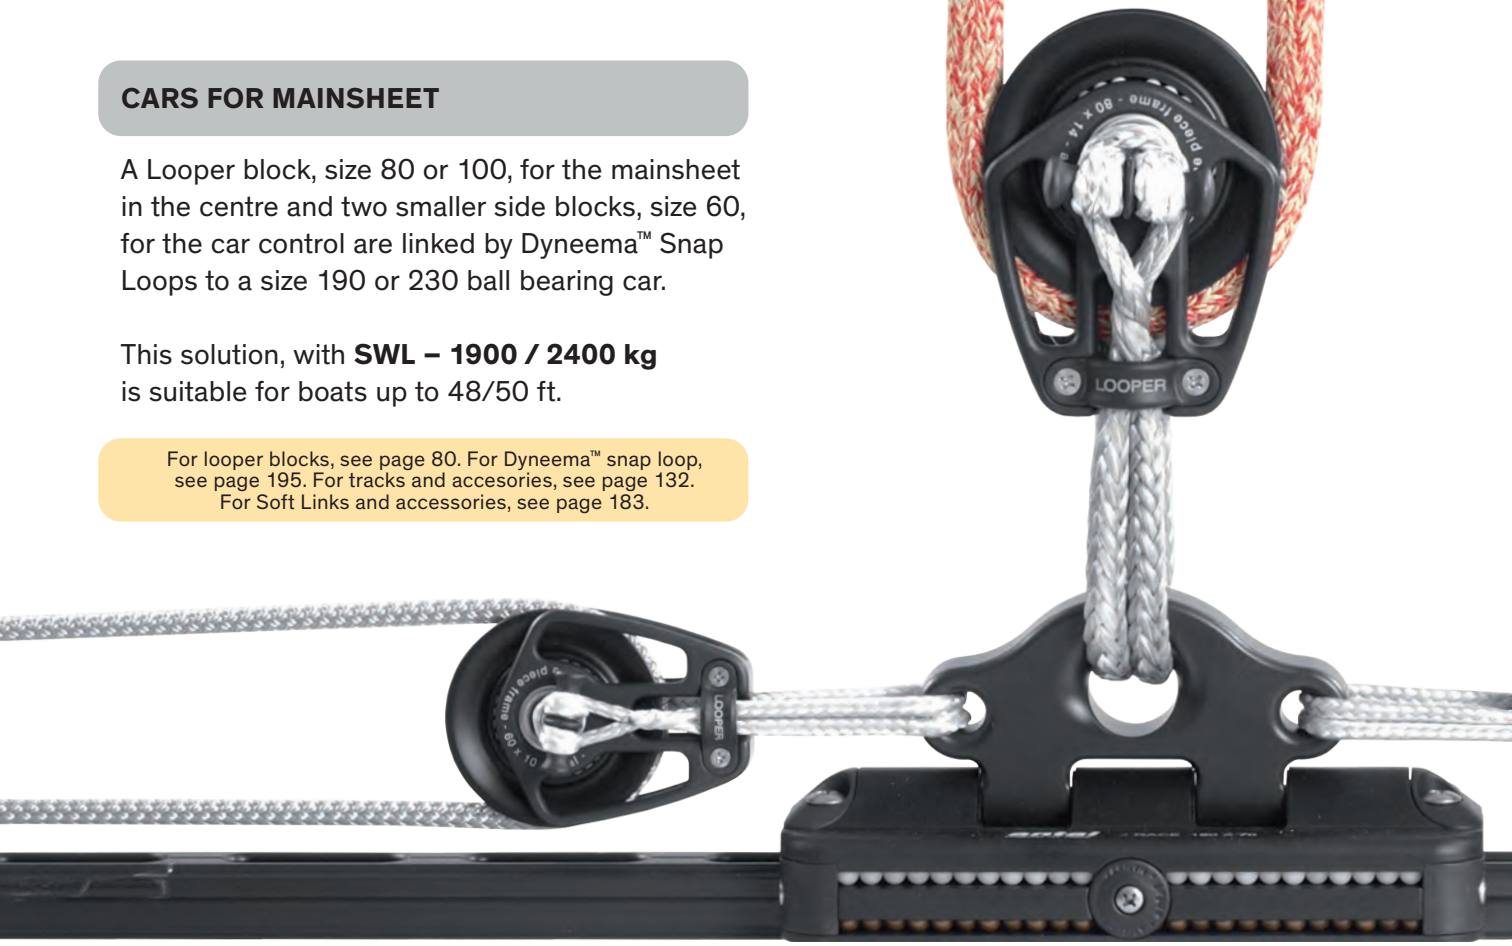
For tracks and track end fittings, see page 132.
For rings, see the ring section on page 188.

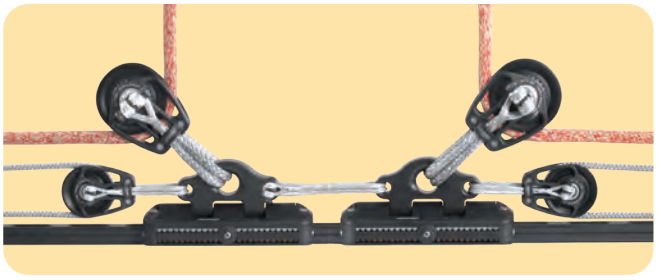
CARS FOR MAINSHEET

A Looper block, size 80 or 100, for the mainsheet in the centre and two smaller side blocks, size 60, for the car control are linked by Dyneema™ Snap Loops to a size 190 or 230 ball bearing car.

This solution, with **SWL – 1900 / 2400 kg** is suitable for boats up to 48/50 ft.

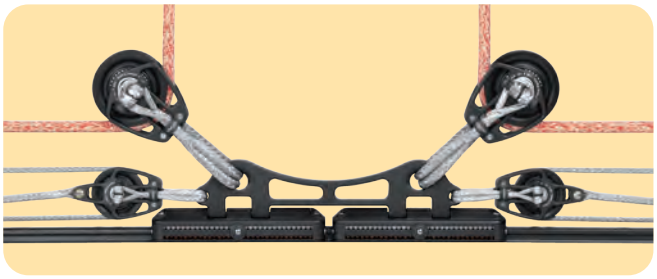
For looper blocks, see page 80. For Dyneema™ snap loop, see page 195. For tracks and accesories, see page 132. For Soft Links and accessories, see page 183.





→ For larger boats up to 60 ft and **SWL** up to **3800 kg**, two cars can be linked together.

Two Looper blocks, size 80, for the sheet and two Looper blocks, size 60, for car control complete this double 190 mm car.



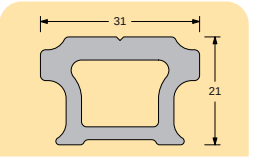
→ Custom solution with two extra-long cars (2×230 mm) and **SWL – 4800 kg**.

Two Looper blocks, size 100, for the mainsheet and two Looper blocks, size 70, for the side control, complete this solution designed for a 65 ft boat.

Farnova 60

Genoa cars

4RACE Sizes 160-190-260

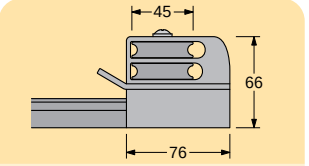


Information about the track on page 132.

SIZE 160 — For boats up to 42 ft

This 160 mm long traveller (**SWL – 1400 kg**) is fitted with one 60 mm sheave, for the genoa sheet, and two 45 mm sheaves for the car control. All these sheaves are made of high strength resin with a double side ball bearing.

CAR CONTROL 4:1

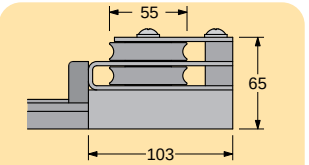


MOD. **4274G**
End fitting, 2 sheaves (D = 45 mm) and becket

SIZE 190 — For boats up to 48 ft

This 190 mm long traveller (**SWL – 1900 kg**) is fitted with one 75 mm aluminium sheave with Composite Fibre main bearing for the genoa sheet, and two 55 mm resin sheaves for the car control. All these sheaves are made with a double side ball bearing.

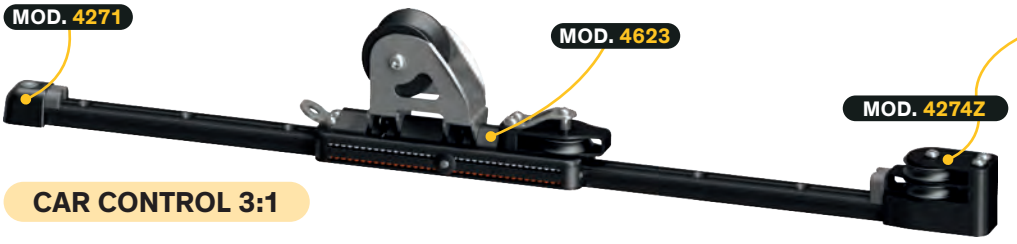
CAR CONTROL 4:1



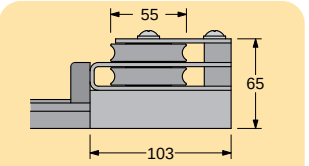
MOD. **4274Z**
End fitting, 2 sheaves (D = 55 mm) and becket

SIZE 260 — For boats up to 52 ft

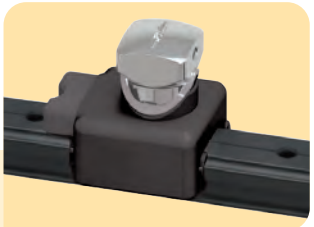
This 260 mm long traveller (**SWL – 2800 kg**) is fitted with one 75 mm aluminium sheave with Composite Fibre main bearing for the genoa sheet, and one 55 mm resin sheave for the car control. All these sheaves are made with a double side ball bearing.



CAR CONTROL 3:1



MOD. **4274Z**
End fitting, 2 sheaves (D = 55 mm) and becket



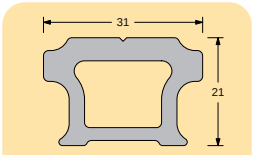
MOD. **4291**

Systems of this page may be completed with the adjustable stop pin MOD. **4291** (only with track MOD. **4520**).

Transverse Genoa car

4RACE

MOD. 4150C | **TRANSVERSE GENOA CAR** | **For boats up to 50 ft**



Information about the track on page 132.

This 150 mm long traveller (**SWL – 1400 kg**) is fitted with two high-load Ø20 mm sheaves and one integrated side ring for a 2:1 control to move the car inward. It moves outwards automatically.

WEIGHT – 0.80 kg

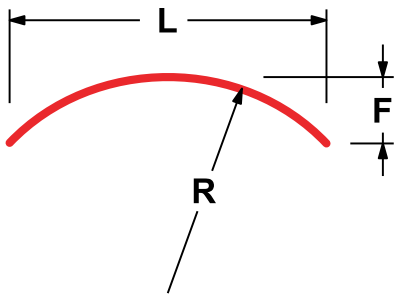
MAXIMUM BENDING (MINIMUM RADIUS) FOR ANTAL TRACKS

On request Antal will supply bent tracks whether in the vertical or in the horizontal plane. Minimum radius for different lengths of the car: 110, 150 and 190 mm are quoted on the tables.

Horizontally curved track with a size 110 car.



To find the value of the curved radius start from the length (**L**) and height (**F**) of the arch using the following approximate formula (**R**, **L** and **F** will be measured with the same unit of length).

$$R = \frac{L^2}{8 \cdot F} \qquad F = \frac{L^2}{8 \cdot R}$$

MOD. **JB06** MOD. **JB08** MOD. **JB10**

SELF-TACKING JIB BOARDS

5 hard black anodized aluminium models for webbing connection to the sail.

There are 4/5 different positions for the sheet block that will be simply fixed with an HR shackle.

Self-tacking systems

4RACE

SELF-TACKING SYSTEMS

Antal has two solutions for self-tacking using track and travellers of the new 4Race system. The first solution (**DWG. 1**) needs a “footblock” for the sheet on one side of the track; the sheet, from this footblock, goes to the cockpit. In this case the track will be curved only in the horizontal plane.

In the second solution (**DWG. 2** and **3**) the sheet climbs up the mast then down and to the cockpit as a halyard. In this case the track will be curved vertically and trimmed forward.

Travellers with one or two sheet blocks will be used. Double cars are often considered because a shorter car accepts a smaller radius. To control the traveller moving it will be useful to consider also two side stop-pins (**MOD. 4290**) and consequently the track for stop pin (**MOD. 4520**).

Systems of drawings 1 and 2 are obtained with 2×110 mm travellers and 2×70 mm blocks (for boats up to 50 ft), or 2×150 mm travellers and 2×80 mm blocks (for boats over 50 ft).

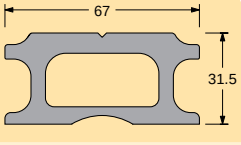
TRAVELLERS

2×530 mm long, hard black anodized aluminium one-piece body on Torlon ball bearings Antal 4Race system (each traveller works on 424 balls).

WEIGHT – 26 kg
SWL – 18000 kg



Information about the track on page 150.

Marisa, Perini Navi – Ph. Rabinowitz

Life Rail System

4RACE Safety device for outboard cleaning and maintenance

LRS is in conformity with **EN795:2012 type D**.

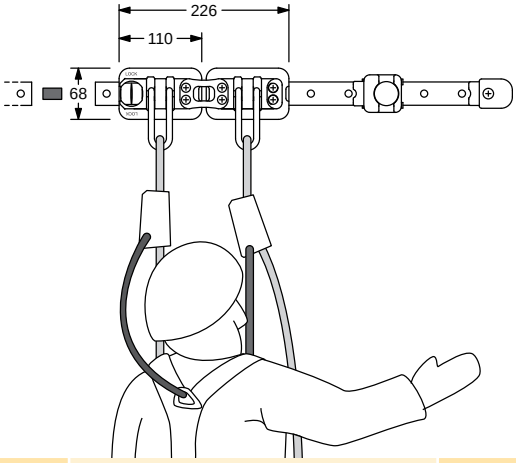
The operator (using a suitable harness) is tied to a double traveller that slides horizontally on the rail and is free to reach the working area in perfect safety.

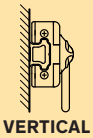
The double traveller is fitted with two shackles and a stop pin:

- Stop pin **open**: it allows the traveller to slide along the whole track;
- Stop pin **closed**: it locks the traveller when it intercepts the first hole in the rail.

Other travellers (without any stop pin) can be connected to the main traveller for further security and for carrying tools or any other material (bosun's chair, etc.).

More information in the LRS user's guide available on request.





VERTICAL

The track can be fixed both on a horizontal surface and on a vertical wall.

HORIZONTAL

The system consists of:

MOD. 4523 Tubular track (31×21 mm) in high resistance hard black (silver on request) anodized extruded aluminium, Ø8 mm fixing screws every 100 mm, holes to stop the traveller every 50 mm, weight 0.75 kg/m, available in 3 m lengths.

MOD. 4271B Aluminium end-fitting with rubber protection.

MOD. 4291 Aluminium stop pin on nylon guides.

MOD. 4283 Track joint, aluminium made. Track joint is supplied with two screws.

MOD. 4118 Hard black anodized aluminium double traveller (2 × 110 mm). The traveller slides on four circuits of Torlon balls and its hold is guaranteed even in the event of the balls failing. Two AISI 316 steel shackles with 180° rotation.

MOD. 4119SP The car with the stop-pin is also available individually.

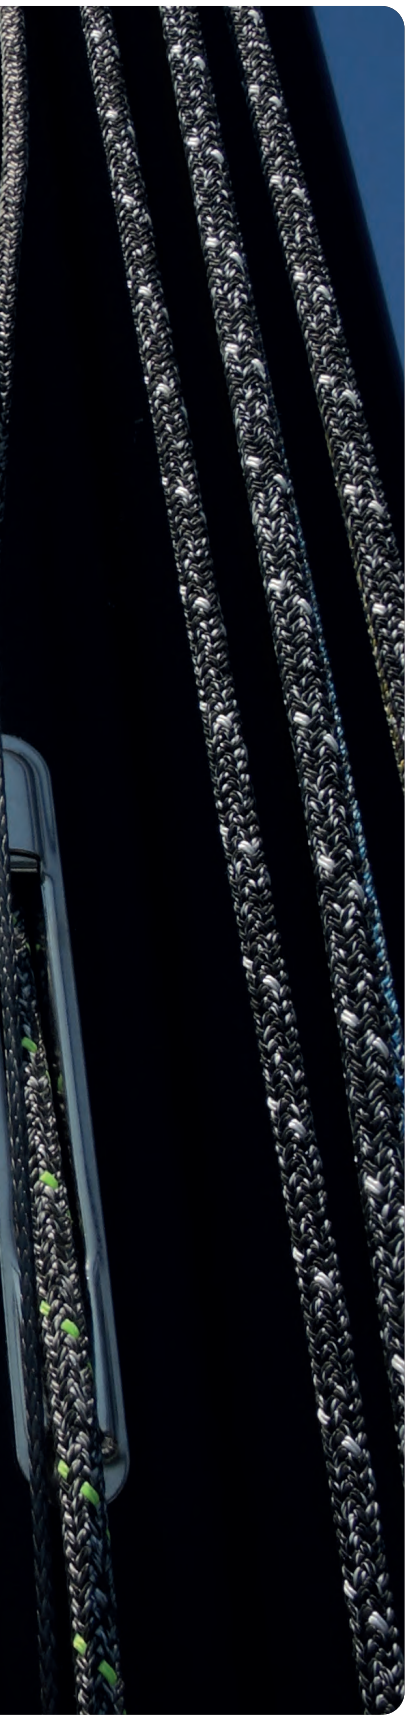
Full batten systems



6 different tracks and 14 slider systems, a wide and complete range for full-batten mainsails, for boats from 30 to 100 ft and for multihulls.

HS GUIDE SYSTEMS
A simple and efficient solution with minimum sizes for very high loads, designed for racing. The HS guide systems have been developed also for cruising and charter boats.

FIBREBALL SYSTEMS
Designed for large boats and for mainsails with a large roach, they offer the high strength of HS Fibre Guides (for tension load) and the low friction of the Torlon ball bearing (for compression).

HS Guide systems

Full batten

The Antal HS Guide System is designed for boats with full batten mainsails that experience high loads and compression-loading on the mainsail luff. The system's aluminium sliders contain HS composite fibre inserts that run on aluminium track mounted on the mast.

HS composite fibre is a new material that is durable over long periods of use and offers extremely low friction coefficients. The material is made from special resins strengthened with fibre and is self lubricating.

The HS Guide System provides the following advantages:

- the low friction properties of the HS composite fibre allows the cars to be shorter than standard ball-bearing car systems, thereby reducing the stacking height at the mast when the sail is down;
- the lower cars can easily be removed from the track when the sail is reefed, thereby keeping the tack low to the boom;
- minimum friction under load;
- less maintenance than ball bearing car systems;
- cars can easily be removed and re-installed on the track whenever the mainsail is changed.

Each batten end fitting is attached to a slider with a triaxial joint to ensure that the batten can freely orient itself under all points of sail. At least one simple slider should be attached to the sail with nylon webbing between two battens. A headboard is attached to the sail with webbing and is secured to the slider (double or triple) with a clevis pin which allows the headboard to pivot and to be removed.

Fibreball systems

Full batten

Designed for large boats and for mainsails with a large roach, they offer the high strength of HS Fibre Guides (for tension load) and the low friction of the Torlon ball bearing (for compression).

Maximum load because the HS fibre guides give excellent resistance to the main pull loads despite the compact size of the carriages.

Each batten end fitting is attached to a slider with a triaxial joint to ensure that the batten can freely orient itself under all points of sail. At least one simple slider should be attached to the sail with nylon webbing between two battens.

A headboard is attached to the sail with webbing and is secured to the slider (double) with a clevis pin which allows the headboard to pivot and to be removed.

SELF-CAPTIVE BEARINGS
It's impossible for the bearings in the slider to come out, so it's possible to take off the sliders from the track.

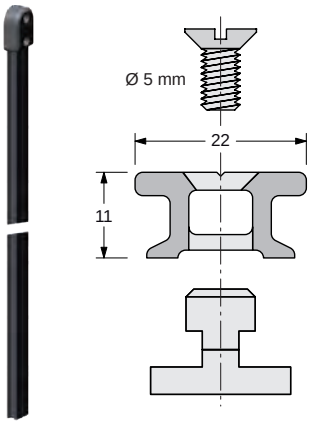
HS22 track

HS22 track is made for systems:

- MOD. **HS22.40**, MOD. **HS22.40R**
  on page 157
- MOD. **HS22.50R**
  on page 158
- MOD. **HS22.60R**
  on page 159



For boats up to 40 ft and racing boats from 35 to 55 ft

MOD. HS22.13 END FITTING

Made in plastic, should be attached to the mast with 2×5 mm screws.

MOD. HS22.12 JOINT

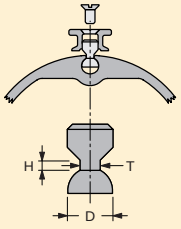
In order to ensure proper alignment the sections of the track can be jointed together with a nylon fitting; track joint is supplied with 2 screws.

SLUGS AND SCREWS

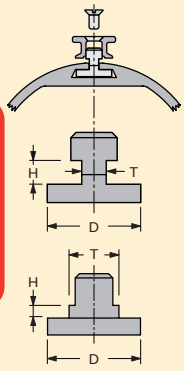
7 standard models for round or flat grooves are available, custom slugs for special grooves are made on request.

Consider 17 slugs for 2 m of track with 120 mm hole spacing or 1 m of track with 60 mm hole spacing.

Screws (**included**) must be fixed using Loctite 222 or similar.



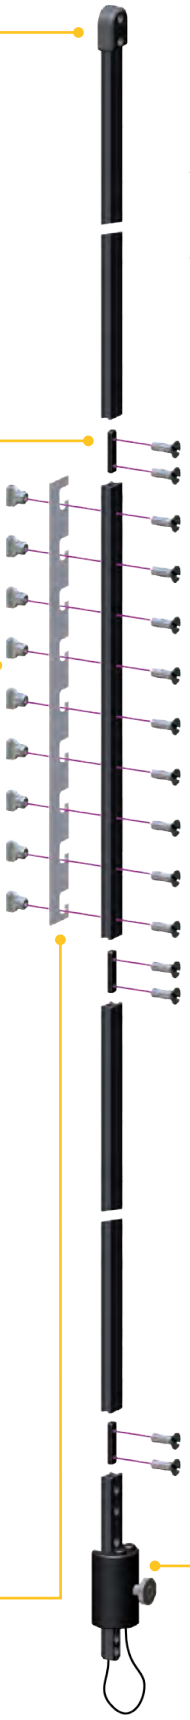
SLUGS → ROUND GROOVE			
MODEL	T mm	D mm	H mm
Ø5×10 mm screws			
HS22R04	3.9	8.7	2.0
HS22R05	4.7	9.5	2.0



SLUGS → FLAT GROOVE			
MODEL	T mm	D mm	H mm
HS22F05	4.7	18.0	4.6
HS22F08	7.8	20.0	4.6
HS22F10	9.8	20.0	2.0
Ø5×10 mm screws			
HS22F12	11.8	22.0	3.0
HS22F14	13.6	24.0	3.0

MOD. HS22.15 INSTALLATION TOOL

It is necessary to position the slugs with the mast in vertical position (with track MOD. **HS22.221** and MOD. **HS22.222**).



TRACK

The Track is an aluminium extrusion hard black anodized and teflon coated.

WEIGHT – 0.34 kg/m

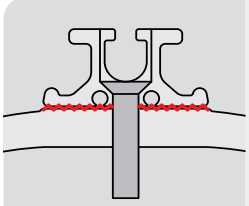
MODEL	HOLE SPACING mm	LENGTH m
↓ DIRECT MOUNTING		
HS22.311	120	3
HS22.312	60	
↓ SLUG MOUNTING, VERTICAL MAST		
HS22.221	120	2
HS22.222	60	
↓ SLUG MOUNTING, HORIZONTAL MAST		
HS22.321	120	3
HS22.322	60	

Direct mounting requires drilling and tapping holes in the mast, slug mounting does not. 120 mm hole spacing for 40-50 ft boats, 60 mm hole spacing for 50-60 ft boats.

MOD. HS22.11 LOADER

It allows the cars to be loaded and unloaded easily; the loader includes a stop pin which provides 2 positions: open and closed.

FIXING – 2×5 screws
L – 176 mm
WEIGHT – 0.10 kg



The **HS22** is also available in the glued version, which is particularly suitable for carbon masts.

Tracks and accessories on the following pages.

HS22 Carbon track

GLUED TRACKS
Wide base profiles for secure strong gluing, particularly suitable for carbon masts. Use for gluing “SP System Spabond 345” or similar. These tracks always have bolt-rope groove.

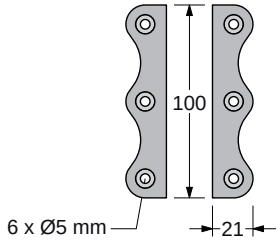
For racing boats from 40 to 60 ft

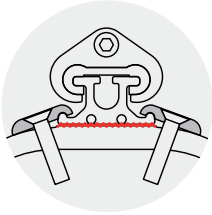
MOD. HS22.03 END FITTING

Made in plastic, should be attached to the mast with 2×5 mm screws.

MOD. HS22.05 SIDE PLATES

Fixing can be improved, on most loaded zones (mast head and reefing positions), with 2 aluminium side plates screwed to the mast.



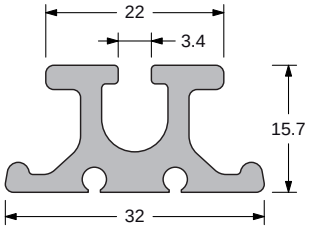


Nautor, Club Swan 50

MOD. HS22.330 TRACK FOR CARBON FIBER MAST

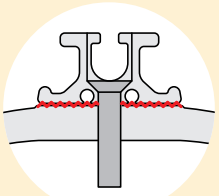
Aluminium profile hard black anodized and teflon coated. It’s available in 3 m sections.

WEIGHT – 0.56 kg/m



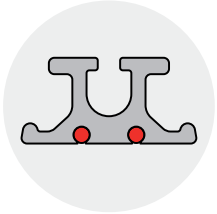
FIXING

The track will be glued to the mast (SP System, Spabond 345). For an easier gluing each track is fixed with 4 positioning screws.



MOD. HS22.02 TRACK JOINT

Connection of different sections will be done with 2 s.steel pins.



MOD. HS22.01 LOADER

It allows the cars to be loaded and unloaded easily; the loader includes a stop pin which provides 2 positions: open and closed.

L – 500 mm
WEIGHT – 0.30 kg

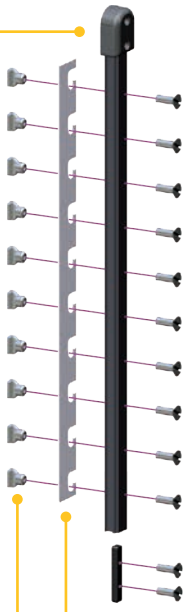
HS24/FB24 track

HS24/FB24 tracks are made for HS guide systems:

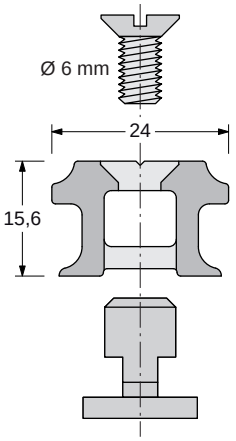
- MOD. **HS24.50** page 160
- MOD. **HS24.60** page 161
- MOD. **HS24.70** page 162

Fibreball systems:

- MOD. **FB24.60** page 166
- MOD. **FB24.90** page 167
- MOD. **FB24.120** page 168



For 50, 60, 70 ft boats



MOD. HS24.13 END FITTING

Made in plastic, should be attached to the mast with 2×6 mm screws.

SLUGS AND SCREWS

8 standard models for round or flat grooves are available; custom slugs special grooves are made on request.

Consider 20 slugs for 2 m of track with 100 mm holes spacing or 1 m of track with 50 mm holes spacing.

Screws (**included**) must be fixed with Loctite 222 or similar.

50-60 ft BOATS – HOLE SPACING 100 mm
60-70 ft BOATS – HOLE SPACING 50 mm

MOD. HS24.11 LOADER

It allows the cars to be loaded and unloaded easily; the loader includes a stop pin which provides two positions: opened and closed.

FIXING – viti 2×Ø6 mm
L – 200 mm
WEIGHT – 0.19 kg

MOD. HS24.15 INSTALLATION TOOL

It is necessary to position the slugs with the mast in vertical position; with tracks MOD. **HS24.221** and MOD. **HS24.222**.

MOD. HS24.12 JOINT

In order to ensure proper alignment the sections of the track can be jointed together with a nylon fitting; track joint is supplied with 2 screws.

HS24/FB24

NEW Carbon track

We've just developed a new HS24 track which is supposed to be glued to the mast. From the great success of our HS22 Carbon Track (page 171) we noticed that the glue-mounted tracks are more and more popular, both on carbon and aluminium masts.

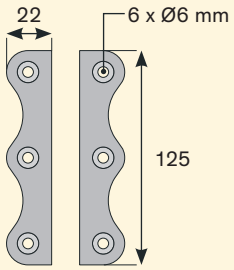
For racing boats from 50 to 70 ft

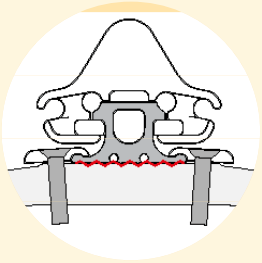
MOD. HS24.03 END FITTING

Made in aluminium; should be attached to the mast with 2×6 mm screws.

MOD. HS24.05 SIDE PLATES

Fixing can be improved, on most loaded zones (mast head and reefing positions), with 2 aluminium side plates screwed to the mast.



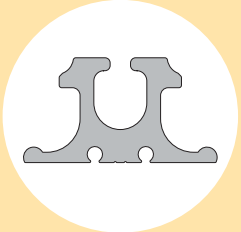


MOD. HS24.06 GATE

A stretch of mobile track is placed above the lowered mainsails. When the gate is removed, the head carriage and top batten slider of a square top mainsails can be extracted.

L – 264 mm

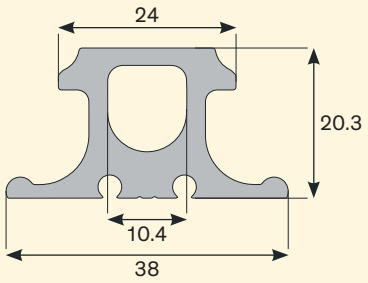
THE HS24 CARBON TRACK IS ALSO AVAILABLE IN THE BOLT-ROPE VERSION ON REQUEST.



MOD. HS24.350 TRACK FOR CARBON FIBER MAST

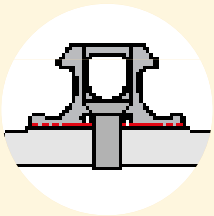
Aluminium profile hard black anodized and teflon coated. Available in 3m sections.

WEIGHT – 0.817 kg/m



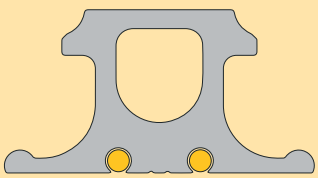
FIXING

The track will be glued to the mast (SP SYSTEM, SPABOND 345). For an easier gluing each track is fixed with 4 positioning screws.



MOD. HS22.02 TRACK JOINT

Connection of different sections will be done with 2 s.steel pins.



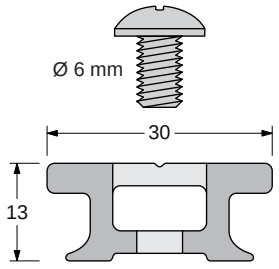
MOD. HS24.04 LOADER

It allows the cars to be loaded and unloaded easily; the loader includes a stop pin which provides 2 positions: open and closed.

L – 200 mm
WEIGHT – 0.25 kg

HS30 track

For 80, 90, 100 ft boats



MOD. HS30.313 **TRACK**

The extremely light (500 gr/m) hard black anodized and teflon coated aluminium profile is very small (only 13×30 mm). It is fixed directly to the mast with 6 mm screws every 50 or 25 mm (without inserts) and is available in 3 m sections.

WEIGHT – 0.50 kg/m

MOD. HS30.313R **TRACK RACE**

As above with lightening holes.

WEIGHT – 0.46 kg/m

HS30 track is made for HS guide systems:

- MOD. **HS30.90**
  page 163
- MOD. **HS30.130**
  page 164

MOD. HS30.13 **END FITTING**

Made in aluminium, should be attached to the mast with the 2×6 mm screws.

MOD. HS30.12 **JOINT**

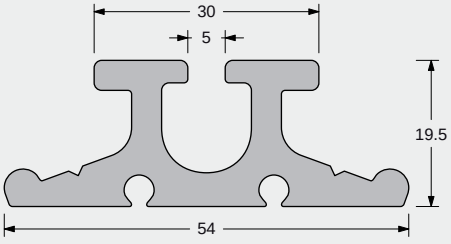
In order to ensure proper alignment the sections of the track can be joined together with an aluminium fitting; track joint is supplied with 2 screws.

MOD. HS30.11 **LOADER**

It allows the cars to be loaded and unloaded easily; the loader includes a stop pin which provides two positions: opened and closed.

FIXING – 2×Ø6 mm screws
L – 210 mm
WEIGHT – 0.20 kg

HS30 BOLTROPE TRACK FOR CARBON FIBER MAST



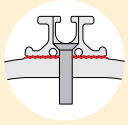
MOD. HS30.330 **TRACK**

Aluminium profile hard black anodized and teflon coated.

WEIGHT – 1.10 kg/m
It's available in 3 m sections.

FIXING

The track will be glued to the mast (SP SYSTEM, SPABOND 315).
For an easier gluing each track is fixed with 4 positioning screws.

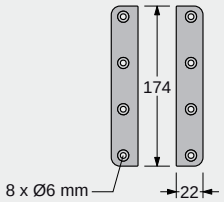


MOD. HS30.03 **END FITTING**

Made in aluminium, should be attached to the mast with the 3×6 mm screws.

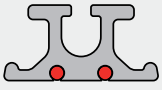
MOD. HS30.05 **SIDE PLATES**

Fixing can be improved, on most loaded zones (mast head and reefing positions), with 2 alu side plates screwed to the mast



MOD. HS30.02 **JOINT**

Connection of different sections will be done with 2 s.steel pins.



MOD. HS30.01 **LOADER**

It allows the cars to be easily loaded and unloaded.

L – 990 mm
WEIGHT – 1.20 kg

FB29 track

MOD. FB29.13 **END FITTING**

Made in plastic, should be attached to the mast with 2×8 mm screws.

MOD. FB29.12 **JOINT**

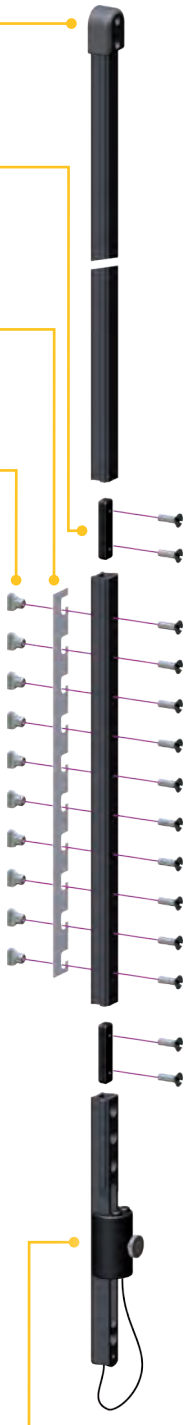
In order to ensure proper alignment the section of the track will be joined together with this nylon fitting: it is supplied with 2 screws.

MOD. FB29.15 **INSTALLATION TOOL**

It is necessary to position the slugs with the mast in vertical position; with tracks MOD. **FB29.221**.

SLUGS

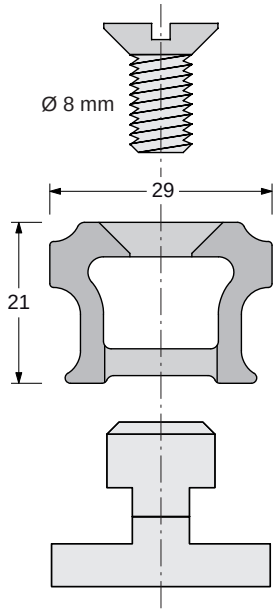
Available on request, for 8 mm screws.



For boats from 80 to 100 ft

FB29 track is made for Fibreball system:

- MOD. **FB29.190**
  page 169



TRACK

Aluminium profile hard black anodized and teflon coated.

WEIGHT – 0.72 kg/m

FEEDER CARRIAGE

Mounted on the bolt-rope tracks to bend the mainsail inside the bolt-rope-groove.
It can be easily removed to fit the mainsail with sliders.

MOD. HS22.09 for loader **HS22.01** of **HS22.330** track (page 171)

MOD. HS30.09 for loader **HS30.01** of **HS30.330** track (page 174)

GATE

A stretch of mobile track is placed above the lowered mainsails.
When the gate is removed, the head carriage and top batten slider of a square-top mainsails can be extracted to make it easier to “tie” the mainsail to the boom.

MOD. HS22.16 L – 204 mm → for **HS22** track (page 170)

MOD. HS22.06 L – 204 mm → for **HS22.330** track (page 171)

MOD. HS24.16 L – 264 mm → for **HS24** track (page 172-173)

MOD. HS24.06 L – 264 mm → for **HS24.350** track (page 173)

MOD. HS30.16 L – 264 mm → for **HS30** track (page 174)

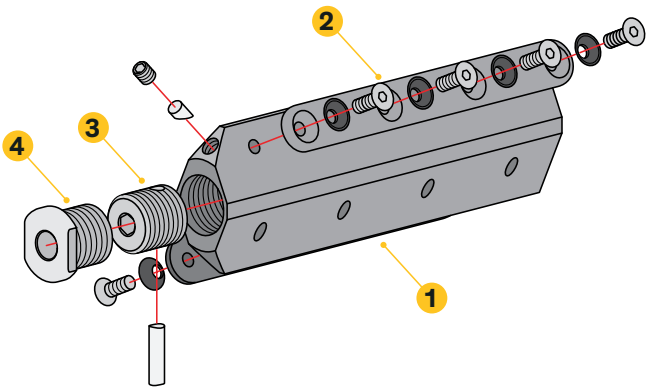
Batten receptacles

SBR – SYMMETRIC BATTEN RECEPTACLE ROUND BATTENS

The SBR is different from standard batten receptacles in that it fits inside the batten pocket, making it invisible on the outside except for the small fastening plate - thereby almost completely eliminating chafe on the mast and rigging. Moreover the batten will be not on one side, but perfectly in the middle.

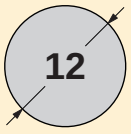
Each SBR includes:

1. The main body.
2. Side plates to fix the receptacle to the sail.
3. Trimming screw for batten compression.
4. The cap with a threaded hole to screw the receptacle in the toggle of the batten slider.



RESIN SBR FOR ROUND AND FLAT BATTENS

Completely made of high-strength, 50% glass fiber resin, max UV resistance, with self-tapping screws to offer a very fast and easy mounting. For boats up to 40 ft.

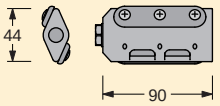


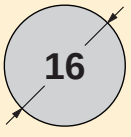
BATTEN

MOD. 609.320

For round batten.
For 10 mm threaded toggle.

WEIGHT – 0.08 kg
FIXING SCREWS – 6





BATTEN

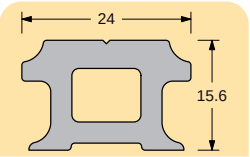
Hook carriages



Track and accessories on page 172-173.

For boats up to 60 ft

HOOK CARRIAGE

This head carriage has been designed for Antal track HS24 (page 172). It is fitted with a hook that automatically catches specific hook stops on the mast track to unload the halyard.

Two lines from the carriage run down the sail:

1. to disengage the hook so that the carriage is free to descend;
2. to load the hook, which attaches to the first hook-stop.

These two lines are connected so when one is pulled the other is automatically released.

MOD. HS24.210 → **HOOK CARRIAGE FOR HS24 TRACK**
WEIGHT – 1.06 kg
LENGTH – 210 mm
SWL – 2400 kg

The carriage is fitted with a swivelling bracket on which it is possible to mount any headboard from the HS24.6 series (page 161) or the MOD. **HS24.61**, specifically designed for this carriage. The halyard is fixed to the headboard.

MOD. HS24.61 → **SPECIAL HEADBOARD FOR HOOK CARRIAGE**
SIZES – 120×130 mm
WEIGHT – 0.25 kg
SWL – 2400 kg

MOD. HS24.17 → **HOOK STOP FOR HS24 TRACK** (page 172)
Fitted on a 340 mm long track that is screwed to the mast with 8 × Ø6 mm screws.

MOD. HS24.18 → **AUTOMATIC HOOK-STOP FOR HS24 TRACK** (page 172)
Similar to the previous model, it has been designed for the mast head. By simply pulling the halyard for a few centimeters, the carriage moves up, the hook is automatically disengaged and the carriage is free to descend. Therefore, even in the event of breakage of the line that frees the hook, the sail can be lowered.

To avoid too many junctions in the track, Antal offers custom tracks with hook-stops that are already fitted at the required points based on the design of the mainsail and reef locations: one hook-stop at the top and two or three for the reefs along the track.

Hook Stop for HS24 Carbon Track (page 173) is also available (MOD. **HS24.07** and MOD. **HS24.08**).

HOOK CARRIAGE

NEW

MOD. HS24.210R → **HOOK CARRIAGE FOR HS24 TRACK**

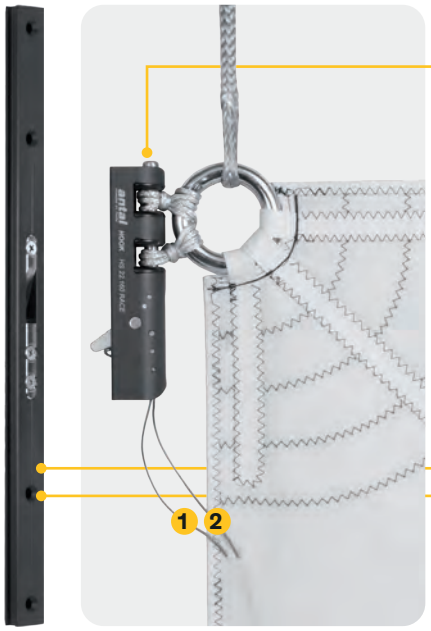
The carriage is fitted with a swiveling bracket suitable for tying directly on the sail head.

WEIGHT – 1.06 kg
LENGTH – 210 mm
SWL – 2400 kg

Shogun 50 – Ph. F. Diemer & O. Sodergren

For boats up to 40 ft

MINI HOOK CARRIAGE



This head carriage has been designed for Antal track HS22 (page 170). It is fitted with a hook that automatically catches specific hook stops on the mast track to unload the halyard.

Two lines from the carriage run down the sail:

1. to disengage the hook so that the carriage is free to descend;
2. to load the hook, which attaches to the first hook-stop.

MOD. HS22.160R → **MINI HOOK CARRIAGE FOR HS22 TRACK** (page 170)
WEIGHT – 0.42 kg
LENGTH – 160 mm
SWL – 1400 kg

MOD. HS22.17 → **HOOK-STOP FOR HS22 TRACK** (page 170)
Fitted on a 340 mm long track that is screwed to the mast with 7×Ø5 mm screws.

MOD. HS22.27 → **HOOK-STOP FOR HS22 CARBON TRACK** (page 171)
Fitted on a 340 mm long track that is screwed to the mast with 4×Ø5 mm screws.

2:1 MINI HEADBOARD SLIDER FOR HS22 TRACK

This model, designed for class 40ft, is fitted with a 40 mm high load sheave for a 2:1 halyard; the mainsail head will be simply tied to the slider with a line.

WEIGHT – 0.45 kg
LENGTH – 185 mm
SWL – 2000 kg

MOD. HS22.185 → **FOR HS22 TRACK** (on page 170)

DOUBLE HEAD SLIDER FOR RING CONNECTION

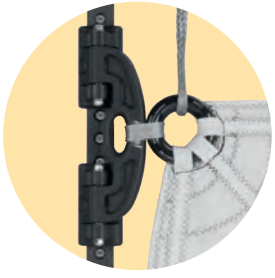
Two 90 mm long sliders with a bracket will be connected to the ring on the head of the mainsail.

WEIGHT – 0.87 kg
LENGTH – 240 mm
SWL – 3200 kg

MOD. HS24.90DY → **FOR HS24 TRACK** (on page 172)

MOD. HS30.90DY → **FOR HS30 TRACK** (on page 174)

DOUBLE HEAD SLIDER WITH SOFT-LINK



Two 90 mm long sliders with a bracket will be tied to the ring on the head of the mainsail.

WEIGHT – 0.65 kg
LENGTH – 240 mm
SWL – 3200 kg

MOD. HS24.90DX → **FOR HS24 TRACK** (on page 172)

MOD. HS30.90DX → **FOR HS30 TRACK** (on page 174)

Soft links

Soft links

The use of Dyneema™ lines, characterized by high stiffness and strength and by excellent smoothness, resulted in the development of new equipment that exalts these properties.

First the fastenings called soft-links: Dyneema™ loops and snap loops that replace shackles, snap-shackles and other metal connections.

Then the rings, now produced in different versions and many sizes that exploit the excellent sliding of Dyneema™ lines, replace sheaves and blocks for more and more manoeuvres.

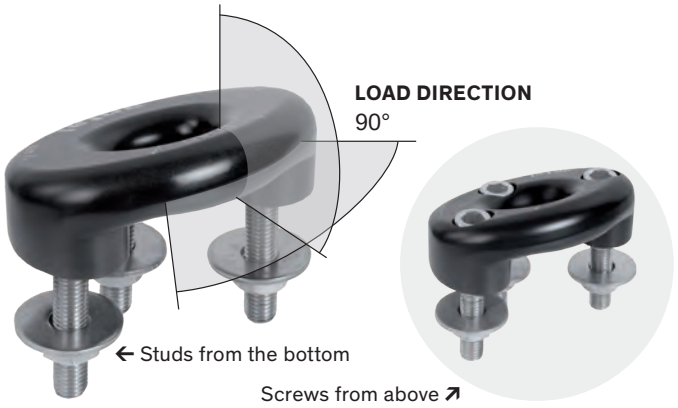
The advantages of this new equipment are: high resistance, increased lightness, a reduction in size and significant cost savings.

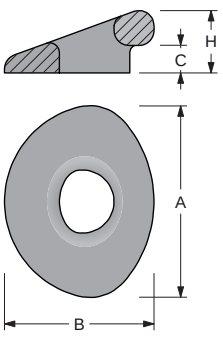
DYNEEMA™ PAD-EYES

Special extremely light, “low profile” pad-eye, designed for Dyneema™ loop in hard black anodized aluminium. The Dyneema™ pad-eye is available in two versions:

- with studs from the bottom and a perfectly smooth upper surface;
- with screws from above.

Studs or screws, washers and nuts **included**.





THE STUDY OF THE PULL DIRECTION
DPE offers great performance on a wide angle. DPE’s profile is so low and smooth that it is walkable. This is because we designed this pad-eye starting from its Pull Direction, and not for a simple coupling.

* without screws-nuts

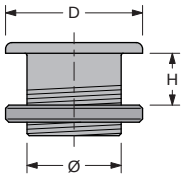
Do not use Antal Dyneema™ Pad-eyes for boat lifting.

T-Lock

T-LOCK FOR SWIVELLING AND REMOVABLE DECK LOOPS

T-Lock is a flush-mounted deck base to which a loop can be connected. A special toggle, which automatically locks-in, fits into the base.

It cannot be removed under load, but can easily be removed without a load on it. The toggle can be locked-in permanently which makes it not-removable. The toggle is swivelling, it can take a load in any direction.



When the toggle is used as a dog-bone it will adapt to any Dyneema™ loop, such as a simple loop, low friction ring with loop and a snatch block with loop.

Two models are available, sizes and characteristics are shown in the table.

T-LOCK						TOGGLE	LOOP AND TOGGLE	RING
								
MODEL	**D** mm	**MAX DECK H** mm	**DECK HOLE Ø** mm	**SWL** kg	**WEIGHT** g	**MODEL**	**MODEL**	**MODEL**
TL22.33	64	33	44	2200	170	**TT22.33**	**TD22.33**	**R20.14**
TL28.41	74	44	54	3500	300	**TT28.41**	**TD28.41**	**R28.20**

ACCESSORIES

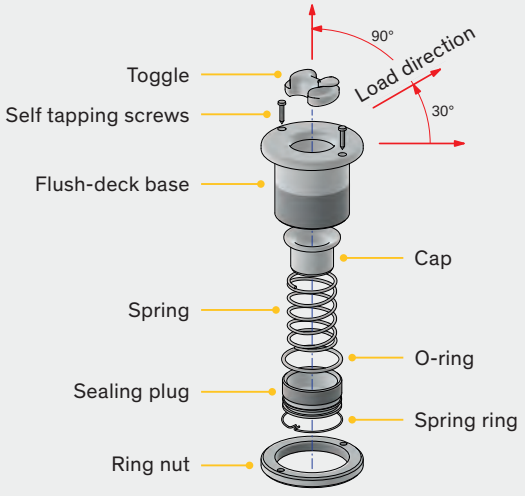
- **SIMPLE TOGGLE**: this is an aluminium dog-bone suitable for splicing your own loop, models in the above table are available on request.

- **LOOP AND TOGGLE**: this is a multi-ring Dyneema™ loop with a cover linked to the toggle, it is always included in the T-Lock.

- **LOW FRICTION RING**: a ring can be inserted in the Dyneema™ loop, models in the above table are available on request.

- **BLOCKS**: Looper blocks (page 80) can be lashed to the toggle and easily locked-in the T-Lock base. This feature is optional.

← T-Lock basis + Looper blocks



There are two positions for the sealing plug:

1. **LOW POSITION** (unscrewed): in this position it is possible to fit the toggle into the base or to take it off (only if not under load).
2. **HIGH POSITION** (screwed): in this position the toggle is permanently locked into the base and it is not possible to take it off.

For load directions with angles of less than 30°, the sealing plug must be completely tightened so as to lock the slug and avoid accidental unhooking.

Do not use Antal T-Lock for boat lifting.

Deck rings

MULTI RING ORGANIZER

Antal Low-Friction products now include a new organizer: MRO, the Multi-Ring Organizer. A CNC-machined body in hard black anodized aluminium, polished finely to guarantee minimum friction. MROs are easy-to-install, extremely lightweight, resistant and practical organizers.

Just like Ring by Antal, they simplify the mechanics and provide great performance. MROs are available from 2 to 7 lines, and fit lines up to 12 mm. Screws **not included**.

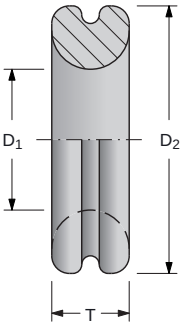
SOLID RINGS

Five models with holes from 22 to 50 mm, the simplest idea for maximum load and minimum weight.

What's good about it
Compared with Antal Ring, Solid Ring has a thinner body and a wider hole with the same extreme working loads. The outer groove is suitable for a hanging line.

Material and finishing
Minimum friction, highly polished, hard black anodized aluminium body. Solid ring has been specifically designed for reefing and for 3D setting of the genoa sheet.

MODEL	D_1 mm	D_2 mm	T mm	WEIGHT g	SWL kg
R22.44	22	44	14	37	1000
R30.56	30	56	16	62	1800
R34.64	34	64	18	89	2800
R40.76	40	76	22	154	4400
R50.94	50	94	25	266	6500



Solid ring has been specifically designed for reefing and for 3D setting of the genoa sheet.

Mast fairleads

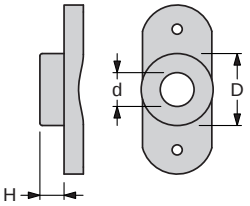
MAST FAIRLEADS

This low-friction fairlead is suitable for mounting on mast, boom and thin wall with no access from behind.

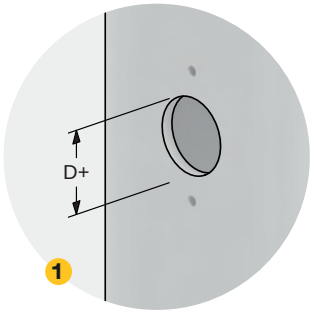
Aluminium made, hard black anodized and highly polished to guarantee minimum friction. 3 sizes with 14, 16 and 18 mm holes for lines up to 10, 12 and 14 mm max.

Just drill a hole of appropriate size (30, 35 or 40 mm for the different models) insert the fairlead into this hole and fix it with two screws (**included**).

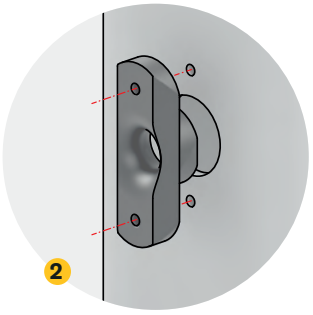
MOD. **RF14.30**



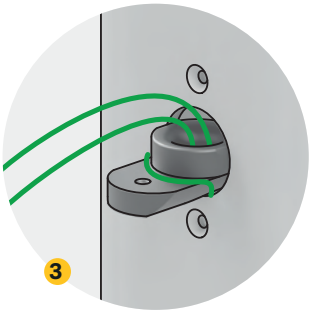
MODEL	d mm	D mm	H mm	WEIGHT g	SCREWS N x Ø mm	MAX LINE Ø mm
RF14.30	14	30	10	39	2 × Ø5	10
RF16.35	16	35	12	62	2 × Ø6	12
RF18.40	18	40	14	90	2 × Ø6	14



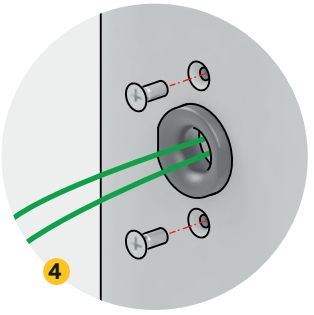
Drill a hole with a hole saw.



Use the Fairlead as a template to mark the position of the two screws and drill the holes.



Tie the Fairlead with a line, insert it into the hole.



Put the Fairlead into place using the line, fit the screws, take off the line and tighten screws.

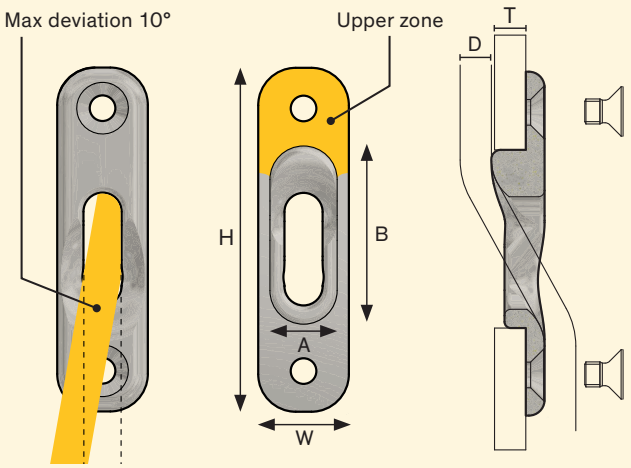
S-Drive

NEW

S-DRIVE

S-Drive is a low friction fairlead designed for the mast exit of halyards with medium-low tension but it is also a solution to drive lines underdeck. S-Drive offers all the advantage of the Low friction rings: light weight and minimum sizes, high load resistance, no maintenance and, not last, low prices.
S-Drive is offered in three sizes for diameters up to 6, 8 and 10 mm and line tension up to 1800 kg.

On the following table main characteristics are sumarized.



MODEL	MAX LINE Ø mm	MAX LINE TENSION kg	A x B mm	W x H mm	SCREWS*	MAX T mm	TOTAL WEIGHT g
SD06	6	700	15 × 39	22 × 77	2 M5	7	20
SD08	8	1000	17.5 × 50	21.5 × 92	2 M6	9	30
SD10	10	1800	21.5 × 57	29 × 110	2 M8	11	46

Ps. If the wall is very thin – less than the screw diameter – it will be advisable to use some glue (Spabond 345) in the “upper zone”.
* Screws are **included**.

RL4.0	10	70	400	4	**R10.07**
RL4.5	10	80	700	4.5	**R10.07**
RL5.0	14	90	900	5	**R14.10**
RL6.0	14	110	1500	6	**R14.10**
RL6.1	20	130	1500	6	**R20.14**

Breaking Load values have been obtained through tests on new Dyneema™ loops, the Safe Working Load (SWL) is obtained from the Breaking Load with a safety factor = 3 to consider the wear and tear of the Dyneema™ lines.

HOOK

It can be easily "hooked" to a genoa or a spinnaker sheet: the lightest and strongest solution for a line control. Aluminium made, highly polished and hard black anodized with a spliced Dyneema™ Snap Loop. A safety spring prevents the line from going out. Spare Dyneena Loops are available. Antal offers a special aluminium pad-eye (page 184) for Dyneema™ Loops.

DYNEEMA™ LOOP SAFETY FACTOR
(Breaking Load / Safe Working Load) = 3

MODEL	MAX LINE Ø mm	L mm	SWL kg	WEIGHT g
HK12	12	110	1500	80
HK16	16	120	2200	130

Highly polished low friction hook, hard black anodized aluminium.

A safety spring keeps the line locked-in, it cannot accidentally release.

Dog-bone for easy opening and closing of the loop.

Spliced Dyneema™ loop. Spare loops available.

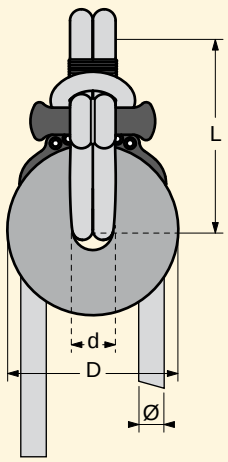
Dyneema™ with polyester cover to reduce wear and tear.

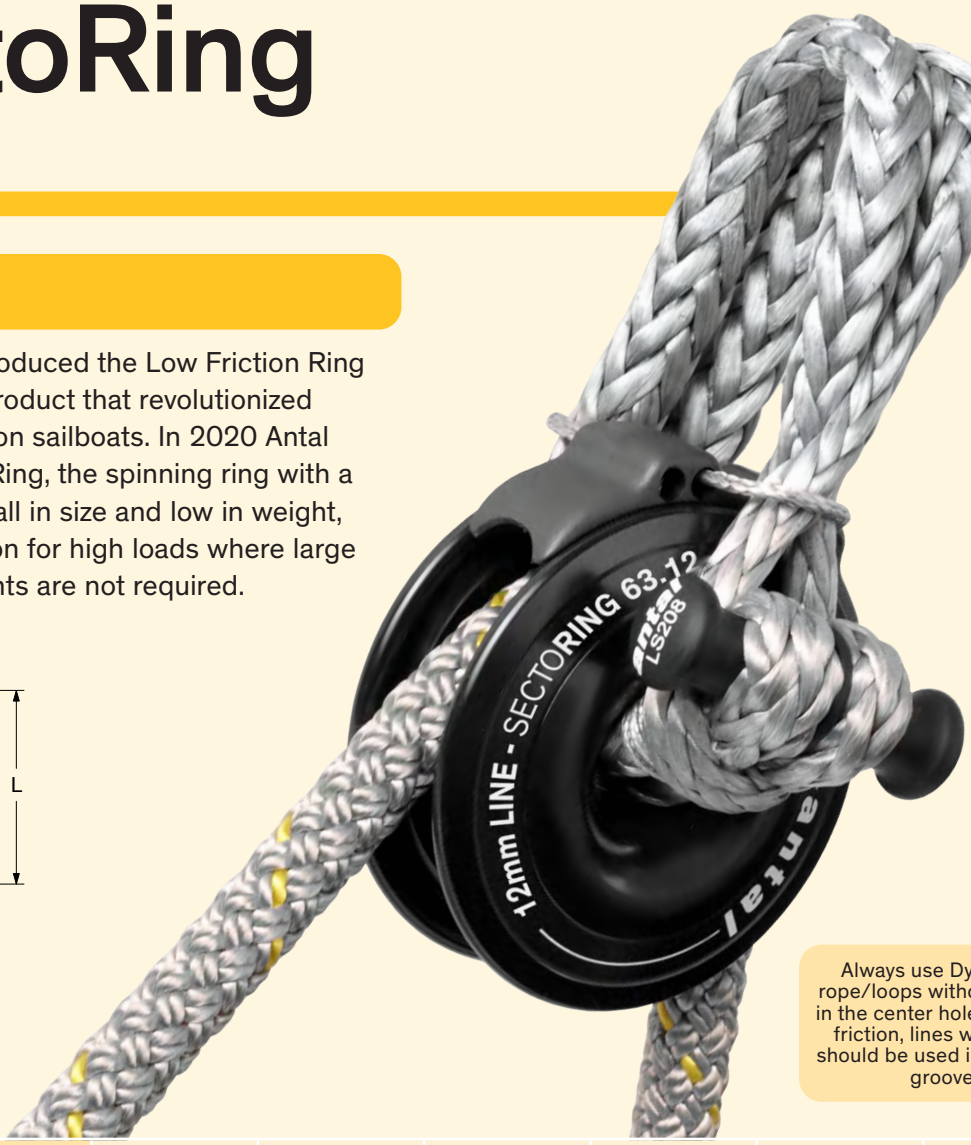
SectoRing

NEW

SECTORING

In 2008 Antal introduced the Low Friction Ring to the market, a product that revolutionized the line-handling on sailboats. In 2020 Antal introduces SectoRing, the spinning ring with a guiding cover, small in size and low in weight, the perfect solution for high loads where large and fast movements are not required.





Always use Dyneema™ rope/loops without a cover in the center hole to reduce friction, lines with cover should be used in the outer groove.

SIZE	MODEL	Ø mm	D mm	d mm	L mm	SWL* kg	WEIGHT g
S	RS43.08	8	43	8	50	1000	45
M	RS53.10	10	53	12	65	1700	80
L	RS63.12	12	63	15	80	2500	145
XL	RS76.14	14	76	20	100	3800	240

***** The **SWL** (Safe Working Load) is **1/3** of the breaking load of the Antal Dyneema™ snap loop.

SectoRing is also available without the Antal snap loop where it can be used in custom fastening applications (in that case the SWL depends on the strength of the fastening but must not exceed Antal values).

Spare Dyneema™ snap loops are available for each model. The loop connections should be checked for chafe on a regular basis, especially in case of fast and prolonged rotations under load which could cause the ring to overheat, resulting in possible damage of the loop.

SIZE	MODEL	WEIGHT g
S	RR43.08	35
M	RR53.10	63

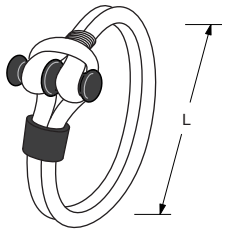
LS2080	6	6600	2200	125	44
LS2100	8	11000	3800	160	81

The Safe Working Load (SWL) is 1/3 of the breaking load, obtained from traction tests on a new Loop.

SNAP LOOPS WITH COVER

These snap loops are obtained with a spliced Dyneema™ line with a polyester cover, an aluminium dog-bone and a locking sleeve. Suitable for Snatch Looper blocks (page 108).

MOD. LS2070



MODEL	DYNEEMA Ø mm	BL kg	SWL kg	L mm	WEIGHT g
LS2061	5	2800	900	110	15

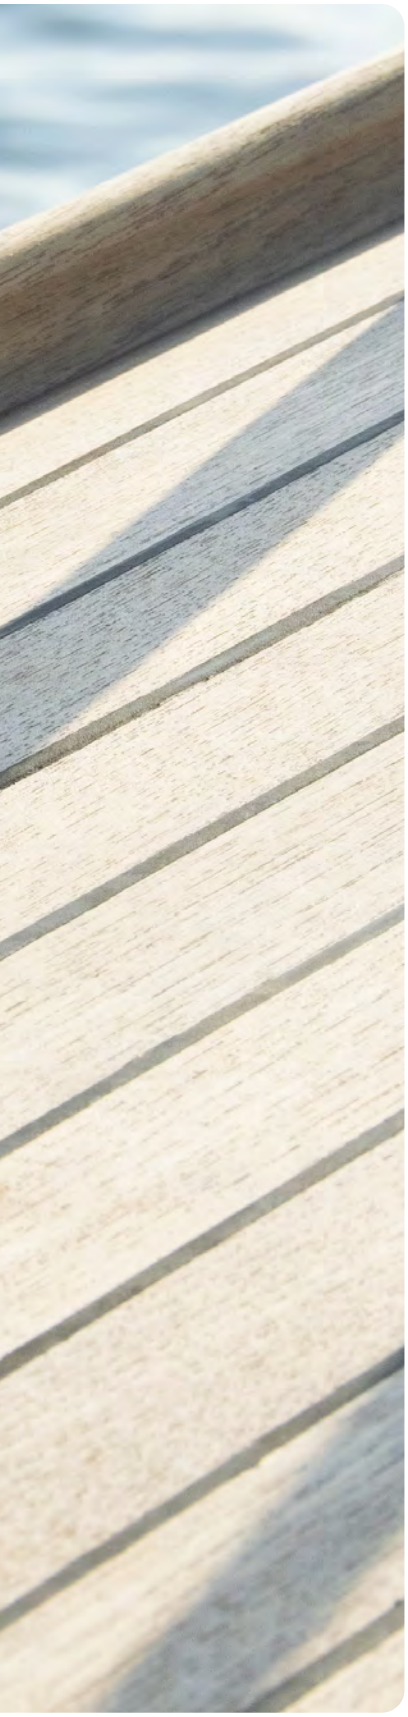
ROLLER
antal
made in Italy

Accessories



Roller cleat

MOD. **RC290SI**

MOD. **RC290B**

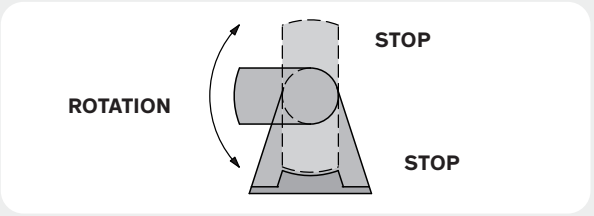
Roller is a folding cleat with rotating horns: with a simple gesture of your hand, you can open or close roller even with the line on, just by turning one of the horns.

→ **ROLLER IS OPEN**: You can easily tie or remove the mooring line.
→ **ROLLER IS CLOSED**: This position minimizes the size and, more important, prevents other lines from getting caught.

The horns can be shut down or turned up even under load. Roller is the only folding cleat you can close with the line on. Roller has perfectly rounded shapes in order not to damage the mooring lines.
Available in 4 sizes and 2 finishes: silver (**SI**) or black anodized (**B**). Mounting screws **included**.

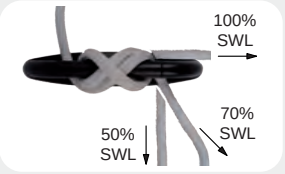
↓ HORN ROTATION

The horn can only be rotated on one side (inward). In this way, Roller can act as a footrest (outward rotation is locked).

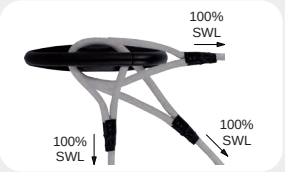


A safety ball keeps the cleat steady in the open or closed position.

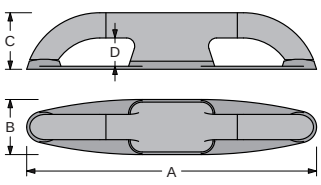
SAFE WORKING LOAD
The SWL may differ according to the pull direction, depending on the type of mooring line used.



→ **MOORING KNOT**
The max. load changes with the line direction.



→ **SPLICED LINE**
The max. load remains the same for any line direction.



MODEL*	A mm	B mm	C mm	D mm	SWL kg	WEIGHT kg	SCREWS N x Ø mm	MAX LOA ft
RC230	232	46	46	21	2000	0.44	2 × Ø10 + 2 × Ø6	36
RC290	287	55	56	28	4000	0.77	2 × Ø14 + 2 × Ø6	46
RC350	346	64	65	31	7500	1.33	4 × Ø12 + 2 × Ø6	58
RC420	418	76	77	36	11500	2.30	4 × Ø14 + 2 × Ø8	70

* For black finishing add **B** to the model number, add **SI** for the silver.

Track adjustable cleat

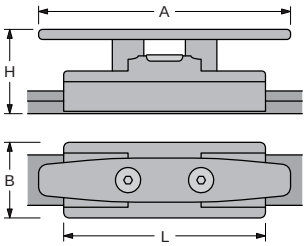
TRACK ADJUSTABLE CLEAT

Two moveable cleats for either 32 mm or 40 mm T-Track. Cleats and slider are CNC machined from hard black anodized aluminum, low profile design. Single screw-in stop pin keeps the cleat firmly locked in any position along the track, or locked open for easy of movement. Nylon insert on the slider for easier movement.

S.steel version available, add **S** after the model number.

MOD. **622.412**

S.steel version (MOD. **622.412S**)



MODEL	T-TRACK mm	PIN Ø mm	A mm	B mm	H mm	L mm	WEIGHT g

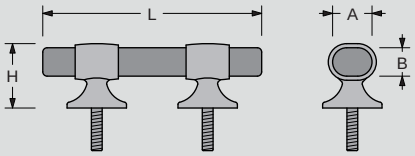
Mestral Marine Works, MMW Custom 33, M. Molino & J. Nivelt

CLASSIC CLEATS

This cleat is a classical look cleat formed by a teak beam and a double s.steel basis.

Teak Cleat is available in two sizes.



MODEL	A mm	B mm	H mm	L mm	SCREWS Ø mm
7412	36	26	60	320	10
7413	48	31	73	400	16

No Welding pad-eyes

NEW

NO WELDING PAD-EYES

No Welding: no corrosion, guaranteed performances. No-Welding products guarantee absence of defects (cracks) and therefore maximum and constant performances.
No Welding products avoid completely corrosion problems due to overheating. The possibility of disassembly allows easy connections with spliced lines and joints. 316 S.steel, highly polished pad eyes.

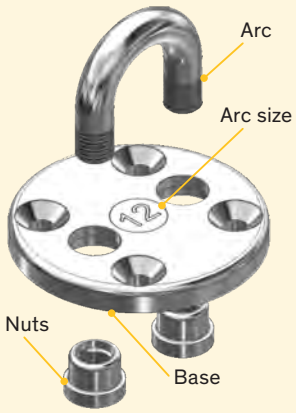


FIG. 1

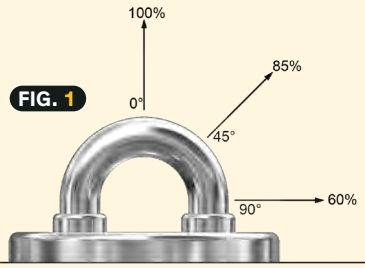

FIG. 2

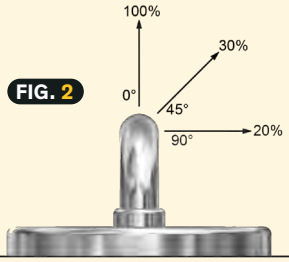


The pad-eye should be positioned so that the direction of the main load is in the plane of the arc. For different load directions appropriate reduction of the SWL must be considered (see **FIG.1**).

Loads in the transverse plane can cause deformations of the arc therefore appropriate reductions of the SWL must be considered (**FIG.2**). However with side loads small deformations will always be possible.

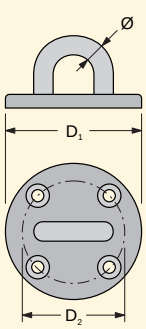
PAD-EYES

MOD. **7212**

MOD. **7206**

MOD. **7216**

These models, made in AISI 316 s.steel, are fixed to the deck with 2/4/6 screws that guarantee the best distribution of the load, making them the right solution for heavy loads. They can be fitted with a block and a stand-up spring.



MODEL	Ø mm	D_1 mm	D_2 mm	SCREWS N x Ø mm	WEIGHT kg	SWL kg	FOR BLOCK Ø mm
7206	6	44.5	31	2 × Ø6	0.10	800	**60**

7214	14	99	74	4 × Ø10	0.68	4600	**120**
7216	16	110	84	6 × Ø10	1.10	6500	**140 - 150**
7220	20	129	104	6 × Ø10	1.80	9000	**180**

SCREWED EYEBOLTS

Made of AISI 316 s.steel. This solution allows an easy removal of the eyebolt from the deck. They can be fitted with a block and a “stand-up” spring. Blocks with screwed eyebolts include: block with spring and (removable) eyebolt and the base (fixed to the deck). The same base is suitable for blocks of different sizes: same base for 70 and 80 mm blocks, same for 100 and 120 mm blocks and one for 140, 150 and 180 mm.

MOD. **7306**

The small MOD. **7306** is not build-in but is completely over the deck.

MOD. **7312**

MOD. **7316**

Do not use Antal Pad-Eyes for boat lifting.

Marina Militare Italiana, Corsaro II – Ph. J.R. Taylor

Sliding pad-eye

MOD. SP10.48 **SLIDING PAD-EYE**

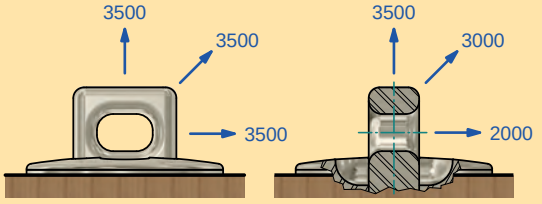
A sliding pad-eye with two positions:

- **OPEN**: for a Dyneema™ line connection or an HR shackle 10 mm connection;
- **CLOSED**: to offer a completely flush deck.

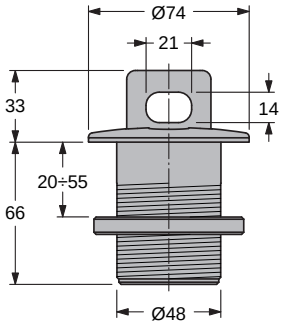
Made from highly polished 316 stainless steel.

WEIGHT – 850 g
SWL – 3500 kg

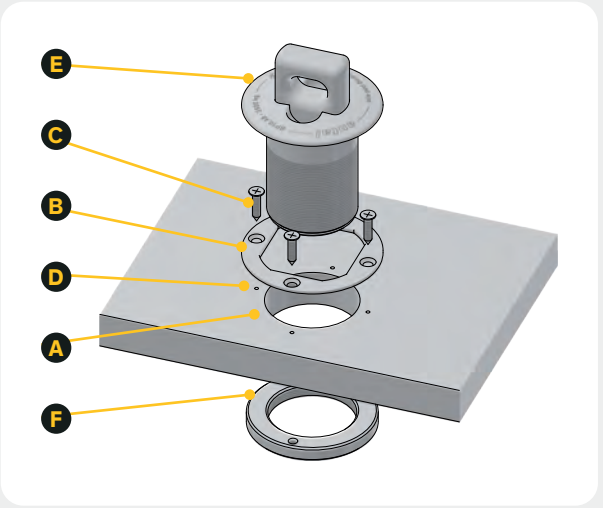
SAFE WORKING LOAD (SWL)



Do not use Antal Sliding Pad-Eyes for boat lifting.



Marina Militare Italiana, Capricia

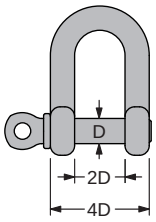


- Drill a Ø48 mm hole (**A**) on a reinforced area of the deck.
- Center washer (**B**) on the hole and turn it so that the pad-eye is along the direction of the maximum load.
- Put some sealant under the washer and fix it with the 4 self-tapping screws (**C**) (first drill 4 holes of Ø3 mm – **D**).
- Put some sealant on the washer and insert cylinder (**E**) into the hole. Rotate the cylinder until it enters the square hole of the washer.
- Lock the cylinder by screwing ring-nut (**F**) from under the deck. The ring-nut is provided with two threaded holes for Ø5 mm screws (not supplied) that can be used for strong tightening.

Shackles and U-Bolts

SHACKLES AISI316 AND HR

Antal supplies standard shackles made in AISI 316 and HR high resistance s.steel. The HR version offers higher values of the Safe Working Load.



AISI316 MODEL	D mm	BL kg	SWL kg	ANTAL BLOCKS Ø mm

LIMITED WARRANTY

Antal guarantees its equipment to be free of defects in material and workmanship for 3 years from the date of purchase. During this period defective parts will be repaired or replaced by Antal.

Warranty **does not cover**:

- Products incorrectly installed;
- Products used in applications for which they are not intended;
- Products used under loads exceeding the product's stated loads;
- Products not properly maintained.

Warranty **does not cover** defects due to corrosion, U-V degradation, and normal wear and tear. Products subject to warranty claim will be returned to Antal for examination and possible repairing or replacement. Antal is not responsible for installation or shipping costs.

MAINTENANCE

Remove salt deposits with fresh water; frequently washing will avoid corrosion that is activated from salt water. Grease (Hydrolub) or Loctite or anticorrosive product will protect aluminium; it will be useful to use some grease on s. steel parts: screws, washers, pin to reduce the contact with aluminium.

Although all Antal products are made only with anti U-V plastic it will be better to reduce the exposure to sunlight.

SOLAR PLANT

The new Antal photovoltaic solar plant with a surface of 500 m^2 and a power of 20 kw will supply 20% of the energy necessary for the production.

Our passion for sailing is also care for the environment.
